Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Credit card only	(973-8018)		

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Aboriginal Youth in Canada: A Profile Based Upon 1981 Census Data

* G.E. Priest

Introduction

The United Nations has designated 1985 as International Youth Year. In preparation for the events planned for that year, the Minister of State (Youth) has released two publications, *Focus on Youth and A New Statistical Perspective on Youth in Canada*. These two reports provide a comprehensive view of young people aged 15 to 24. Through the 1980s, meetings are being held to discuss constitutional concerns of the aboriginal people of Canada. It seems appropriate at this time, therefore, to present a profile of the aboriginal youth upon whose shoulders will rest eventual responsibility for shaping the future of their societies.

The 1981 Census has made available for the first time a significant body of data on young people of aboriginal origins. Although these data are not comprehensive they do provide, nevertheless, an insight into the demographic, social and economic situation of aboriginal youth. This paper examines the Inuit, status Indian, non-status Indian, Métis and non aboriginal populations in the light of their mobility status, family status, level of schooling, school attendance, labour force participation, occupation and income.

It should be noted that there are some limitations with the data used. First, the data exclude that population who are permanent or usual residents in institutions (e.g., general hospitals or corrective or penal institutions). Generally, persons continuously resident in an institution for a period of six months or more are considered to be usual residents therein. Subsequent to the publication of the 1981 Census data, it was learned that a number (possibly, in excess of 7,000 persons) of East Indian origins had reported themselves as aboriginal persons of Canada. In this report they have been excluded from the counts of aboriginal persons, therefore, there may be discrepancies in some counts between this report and others already published. It should also be noted that some users of the data have claimed that the census counts of aboriginal people are low compared to other estimates. It should be stressed that the census counts, most of which are based upon weighted estimates from 20% sample of households, reflect respondents' perceptions of their ethnic origins and as such it might be expected that there would be differences with other sources, such as administrative records. Nevertheless, most users have agreed that the characteristics of the population in question are representative inasmuch as they are measures of socio-economic activity in modern society. It might be argued that measures such as labour force activity and dollar income are less valuable in assessing well being in other traditional, subsistence or bartering societies. Finally, this report is limited to data available from the 1981 Census since most other sources of data on youth do not identify aboriginals as a distinct population. The following analysis excludes inmates of institutions.

Highlights

- Youth comprise close to 23% of the aboriginal population which is a slightly higher proportion than for the non aboriginal population (around 19%);
- Close to 60% of aboriginal males and 56% of aboriginal females live in rural areas compared to 23.3% of non aboriginal males and 21.4% of non aboriginal females;

---

* G.E. Priest is the Director of the Housing, Family and Social Statistics Division.

- For both aboriginal and non aboriginal youths, females have a much higher propensity to move than males. Although for both sexes aboriginals are more inclined to move than non aboriginals;
- Aboriginal youth are more likely to be spouses or lone parents than non aboriginal youth. One in eight aboriginal females aged 20-24 is a lone parent compared to close to one in 33 non aboriginal females;
- Aboriginal youth who have started families have more children than non aboriginal youth;
- The educational attainment of older (20-24 years) aboriginal youth is substantially below that of non aboriginal youth. It also varies considerably by sex and among the aboriginal groups. For example, one out of every two Inuit females aged 20-24 has less than Grade 9 education (compared to one out of 27 for non aboriginal females);
- Close to one in four aboriginal males are neither in school nor in the labour force compared to one in 17 non aboriginal males;
- Status Indian youth have the lowest labour force participation rates, slightly below that of Inuit, both of whom are primarily rural-based populations;
- Status Indian and Inuit youths also have the highest unemployment rates, the highest being for status Indian females aged 15-19 at 32.3%;
- Over 31% of Inuit female youth have no income compared to 12.1% of non aboriginal females and 4.2% of non aboriginal males;
- Close to 25% of status Indian females are dependent upon government transfer payments for their major source of income compared to just under 8% of non aboriginal females and just under 6% of non aboriginal males;
- Aboriginal males with less than Grade 9 education earned only 54.5% of the income of aboriginal males with a trades training. Conversely, non aboriginal males with less than Grade 9 earned 71.6% of non aboriginal males with trades training indicating a relatively greater incentive to aboriginal youth to pursue such training.

Demographic Factors

As a proportion of the total population, youth (that population aged 15-24) have declined slightly since 1976 after having been at a relative low point in 1956 (Table 1). Demographic factors, particularly fertility, do of course heavily influence these fluctuations and differences between groups in the

Table 1. Youth as a Percentage of the Total Population by Sex for Selected Years, Canada, 1921-1981

Year and sex	Percentage of population	
	Male	Female
1921	16.7	17.8

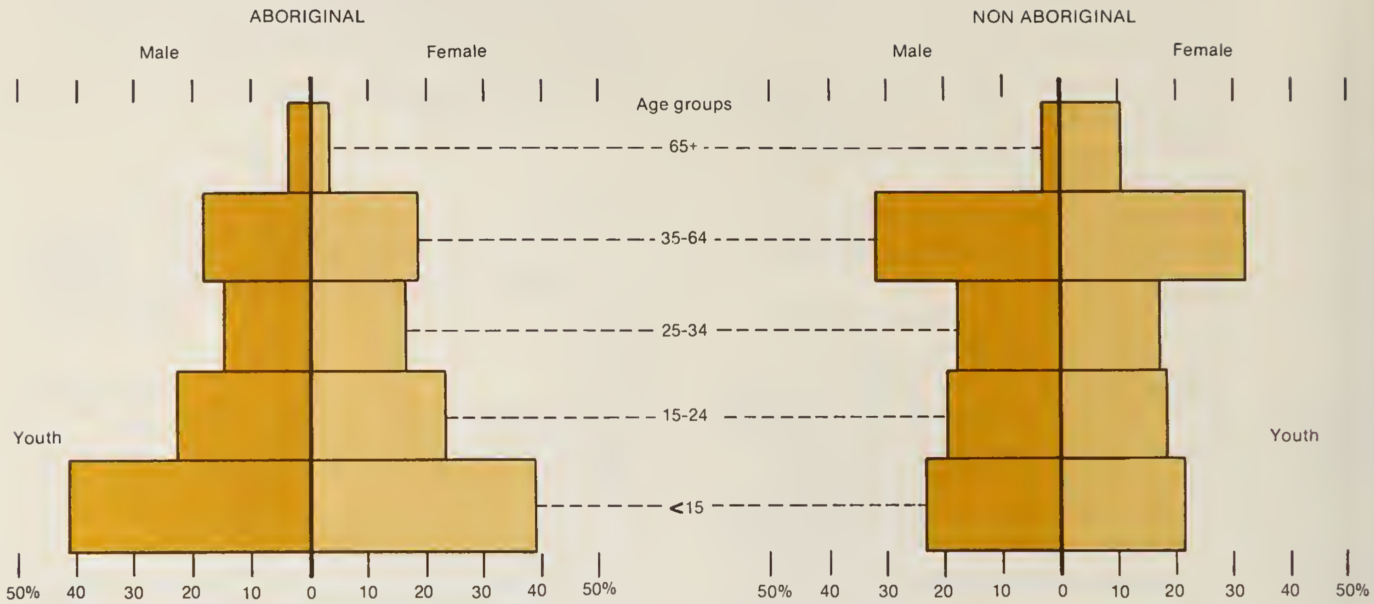
Figure 1

Percentage Distribution of Aboriginal and Non Aboriginal Population, by Age Groups and Sex, Canada, 1981



Source: Table 2.

population. These factors can lead to very different profiles as shown in Figure 1. The high fertility of aboriginal women (the babyboom for the aboriginal population peaked in the mid-1970s compared to the mid-1950s for the non aboriginal population) is reflected in the high proportion of children aged less than 15 for the aboriginal population. On the other hand, higher mortality rates for aboriginal people are reflected in significantly lower proportions of older populations. For example 10.3% of non aboriginal females are aged 65 and over but only 3.4% of aboriginal women are in that age group. The proportion of youths and young adults (25-34 years) are very similar for both the aboriginal and the non aboriginal populations.

A significant difference between the two populations, however, exists in terms of dependent population.[1] For example, 31.2% of non aboriginal males are considered dependent since they are children less than 15 years or they are aged 65 or over. On the other hand, 44.4% of aboriginal males are dependent. The actual dependency ratio is 45.35 for non aboriginal males and 80.01 for aboriginal males. A similar situation exists for females. This implies of course that financial burdens for working age aboriginal people are significantly greater than for non aboriginal people and that is a burden that is being faced by aboriginal youth as they move to accept the responsibilities of adulthood.

Geographic Location

Generally, aboriginal youth are far more likely to be living in rural areas than their non aboriginal counterparts.[2] For both populations, however, a greater proportion of males live in rural areas than females. For example, 60.4% of aboriginal males live in rural areas compared to 56.0% of aboriginal females. By comparison only 23.3% of non aboriginal males and 21.4% of non aboriginal females are rural dwellers. Undoubtedly, geographic location influences both educational and labour activity opportunity.

There are also significant differences among the aboriginal groups themselves, as shown in Figure 2. For example, only 19.5% of Inuit males live in urban areas compared to 28.4% of status Indian males, 55.9% of Métis and 68.4% of non-status Indians. With respect to status Indian youth, 71.6% of the males live in rural areas, the majority on reserves (58.7%). Noteworthy, however, are striking differences between male and female status Indians.

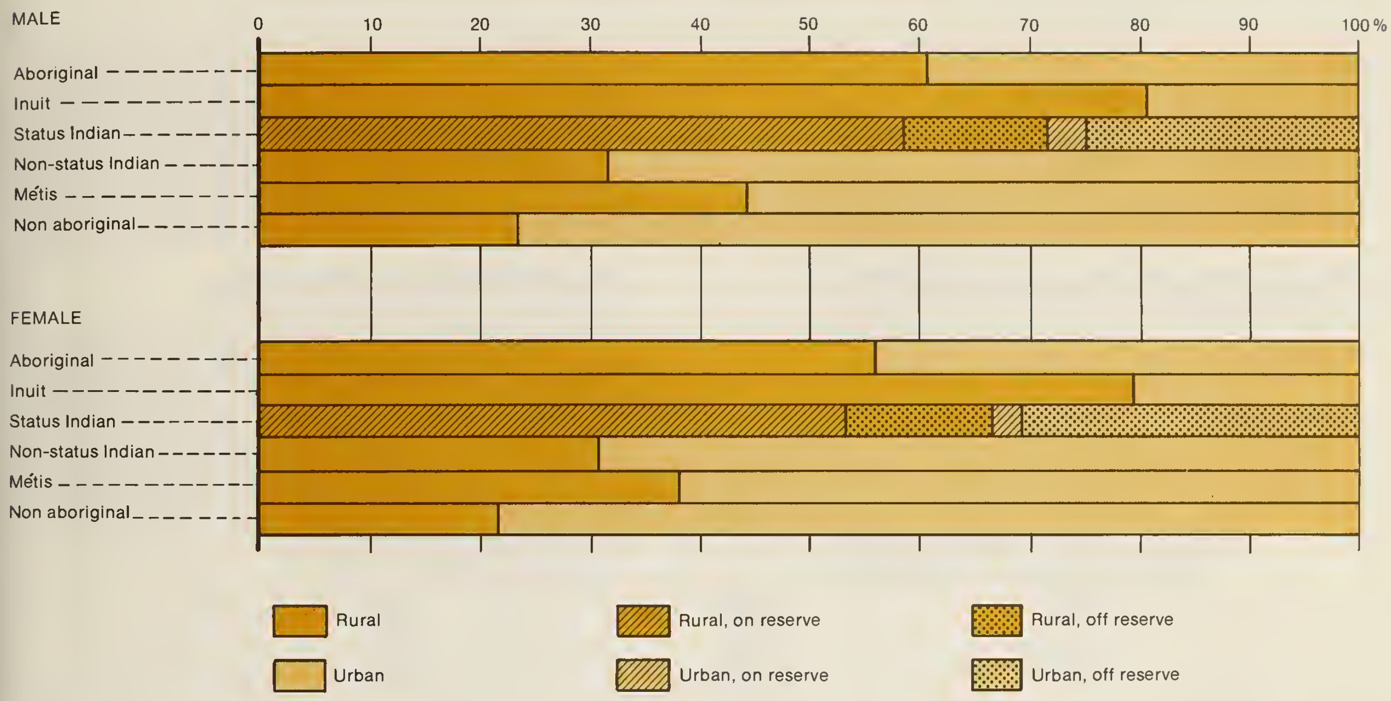
---

[1] Dependent population is here defined simply as that population aged less than 15 and 65 and over and thus not expected to be economically active.

[2] Rural areas are designated as those areas which have a population concentration of less than 1,000 population and a density of less than 400 persons per square kilometre.

Figure 2

Percentage Distribution of Aboriginal Youth Aged 15-24, by Type of Geographic Area, Canada, 1981



Source: Appendix, Table A1.

A much higher proportion of females (30.9%) are living in off-reserve, urban areas, compared to 24.9% of males. Although close to the same proportion of these youths live in rural areas off reserves (over 12%) only 53.0% of the females live on rural reserves compared to 58.7% of the males. While the proportion on urban reserves is small for both sexes it is greater for males (3.5% compared to 2.8%). A similar situation exists with Métis females who show a greater tendency to live in urban areas than their male counterparts.

Mobility Status

Mobility status refers to the relationship between a person's usual place of residence on Census Day and his or her usual place of residence five years earlier. Non-movers are persons who, on Census Day, were living in the same dwelling they occupied five years earlier. Movers, on the other hand, were found to be living in a different dwelling than five years earlier. A further disaggregation of the data would be useful in terms of family status since it can be expected that youth who are children in families move because their parents moved. Spouses, lone parents or non family persons have probably made their own decision to move.

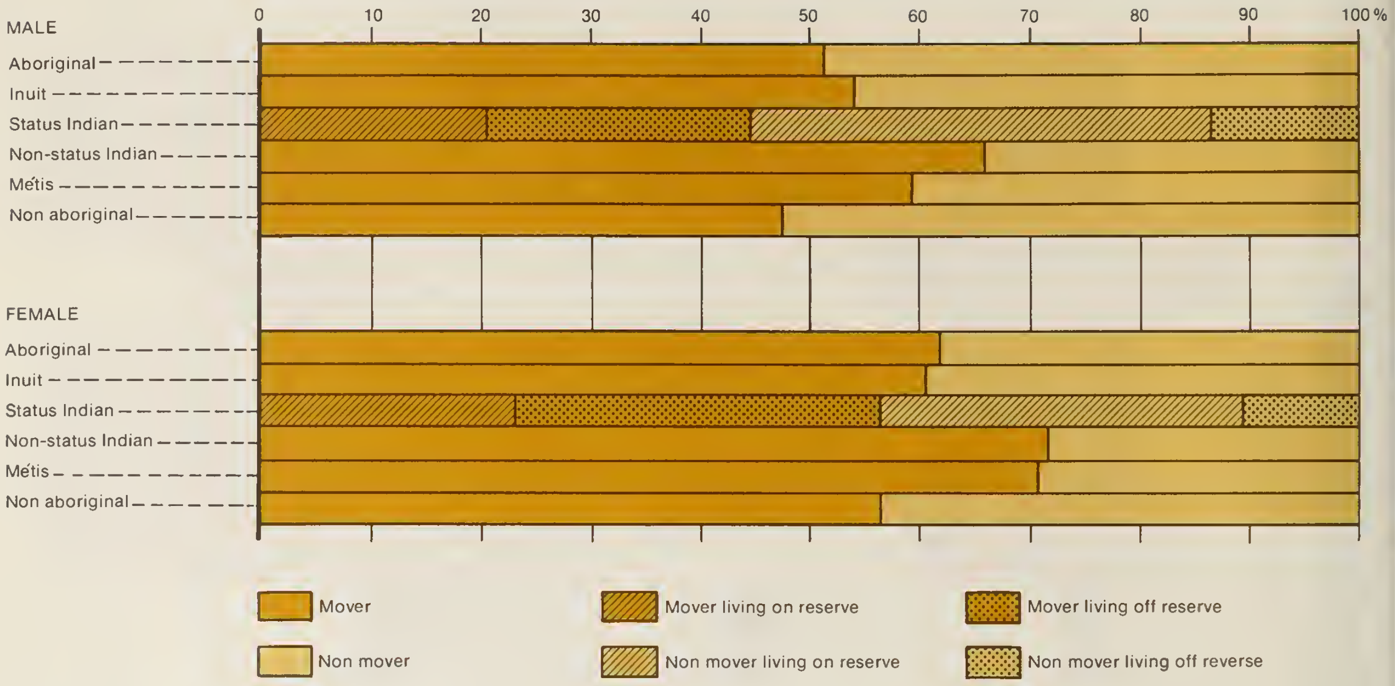
For both the aboriginal and the non aboriginal population, young females show a much higher mobility status than males. For example, 61.7% of female aboriginal youth compared to only 51.2% of males moved to a different dwelling between 1976 and 1981, while 56.3% of non aboriginal females compared to 47.4% of non aboriginal males also made moves. This indicates that for both sexes aboriginal youth have higher mobility rates than non aboriginal. Among aboriginal youth, non status Indian females have the highest rates (71.4%) followed closely by Métis females (70.7%). Status Indian males have the lowest (44.4%) which is even lower than for non aboriginal males (47.4%). Status Indian females have the same mobility rates as non aboriginal females. In effect, Inuit, non status Indian and Métis youth all show a greater propensity to move than status Indian or non aboriginal youth. The similarity between the status Indian youth and non aboriginal youth in mobility status is interesting in light of the status Indian population being primarily rural and the non aboriginal population being primarily urban.

Family Status

As might be expected the majority of youth aged 15-19 are children (i.e., never-married offspring) living with parents but there are significant differences between males and females and aboriginals and non aboriginals (Figure 4). For example, only 1.2% of males in this age group are

Figure 3

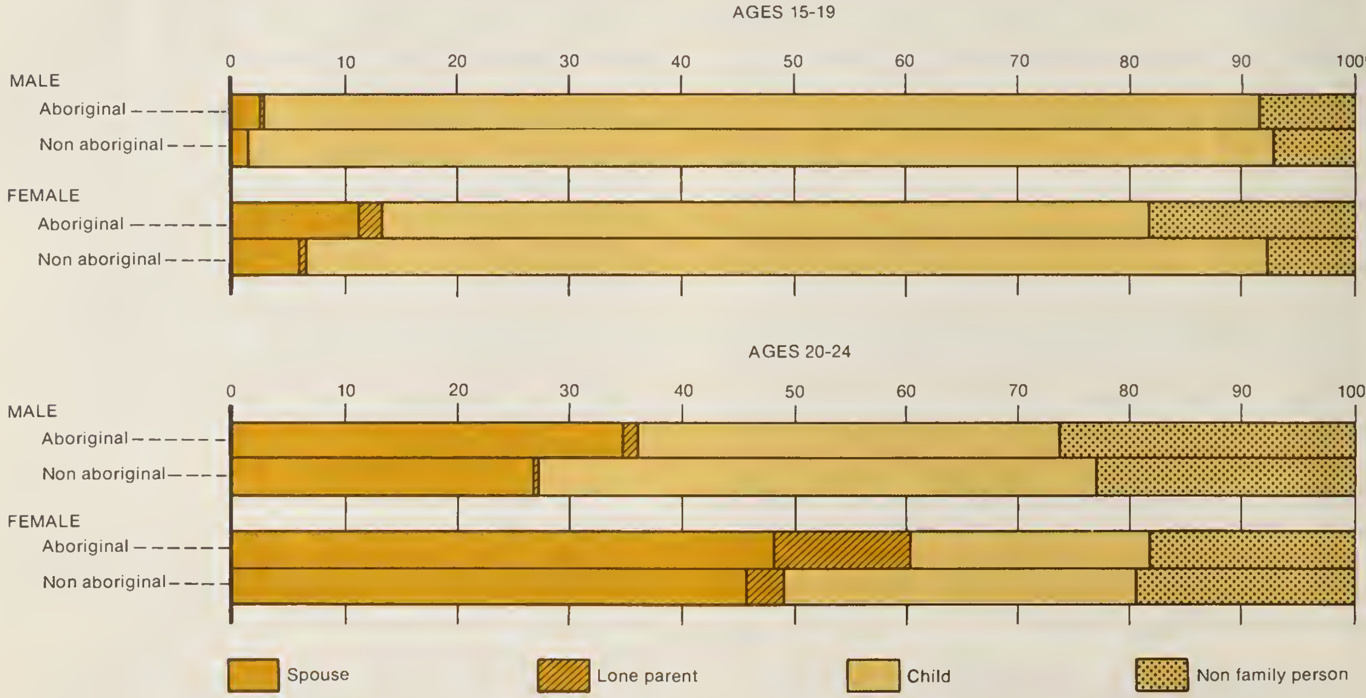
Percentage Distribution of Aboriginal Youth Aged 15-24, by Mobility Status, Canada, 1981



Source: Appendix, Table A2.

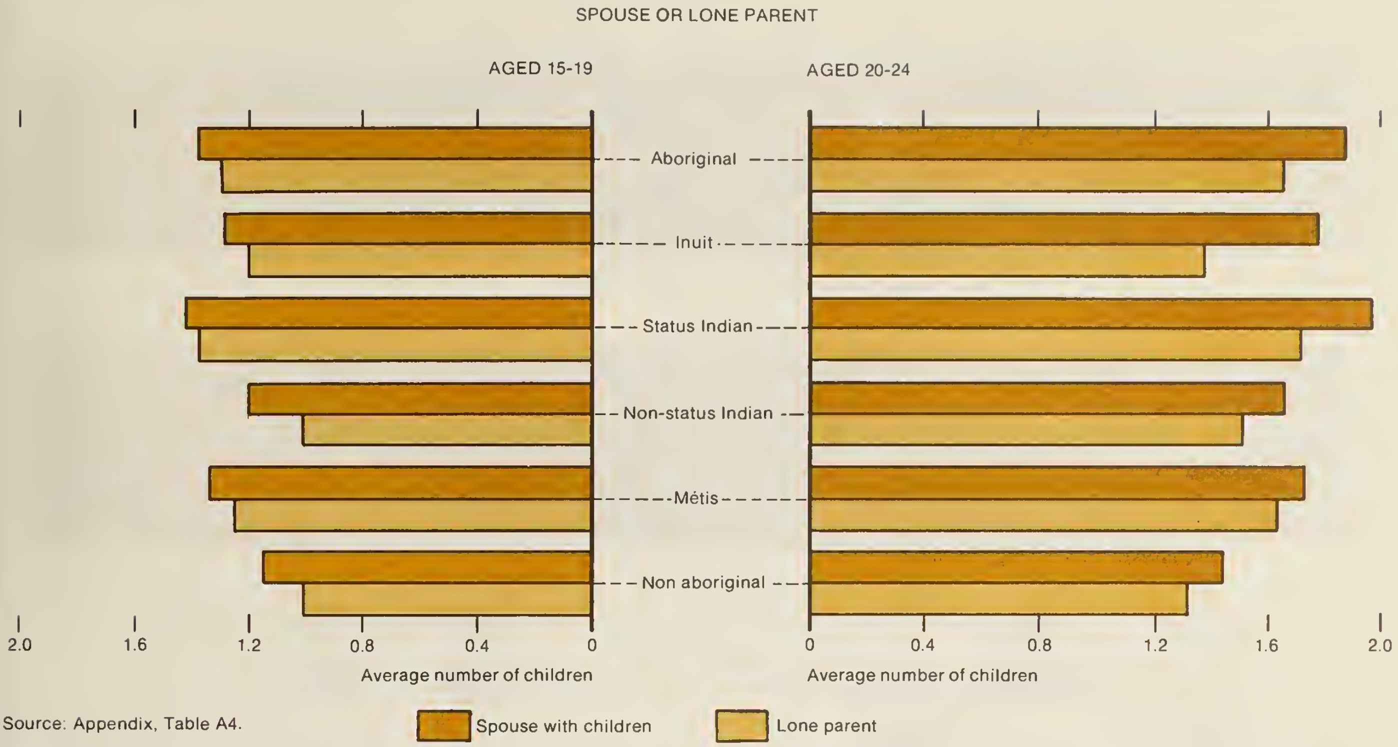
Figure 4

Percentage Distribution of Aboriginal Youth Aged 15-24, by Age Group, Sex and Family Status, Canada, 1981



Source: Appendix, Table A3.

Figure 5
Female Aboriginal Youth Aged 15-24, by Family Status and Average Number of Children at Home, Canada, 1981



Source: Appendix, Table A4.

spouses or lone parents compared to 6.5% of females. Furthermore, 11.2% of aboriginal females are spouses and 2.0% are lone parents compared to 5.9% and 0.5% of non aboriginals. In effect, the responsibility of a family and children come earlier to females than to males, particularly to aboriginal females. A high proportion (over 18%) of aboriginals in this age group are found to be not living with their parents compared to non aboriginals (almost 8%). This figure, however, should be interpreted with caution since it refers to persons living outside a co-resident nuclear family but who in fact, may be living with other relatives in some form of an extended family (e.g., with grandparents or aunts and uncles). The issue could warrant further study, particularly in a broader context that included children as well.

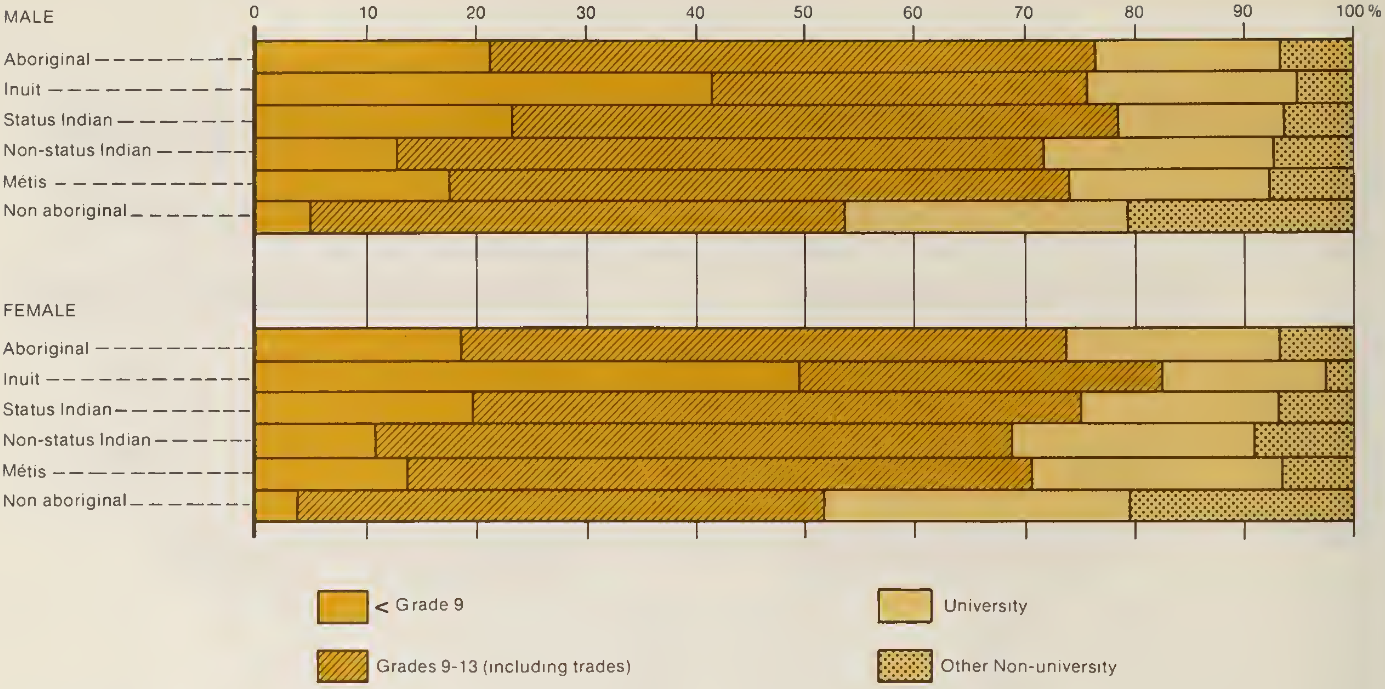
For the older youths (aged 20-24), sex-based differences continue. Only 21.6% of the female aboriginals are classified as children compared to 37.6% of the males. For non aboriginals, 31.8% of females are classed as children compared to 50.1% of males. On the other hand, 36.0% of aboriginal males and 27.0% of non aboriginal males are spouses or lone parents compared to 60.1% of aboriginal females and 48.9% of non aboriginal females. Only a slightly higher proportion of aboriginal females than non aboriginal females are spouses (48.1% to 45.7%) but significantly more are lone parents. In fact, close to one in eight aboriginal females aged 20-24 is a lone parent, raising a child, or children, on her own.

Youth With Dependent Children

As noted earlier, six out of 10 female aboriginal youth aged 20-24 are spouses or lone parents of whom 77.0% are parents. The average number of children being supported by these young people is significant and varies considerably among the aboriginal groups. As shown above, 12% of aboriginal females aged 20-24 are lone parents, and as shown in Figure 5, they have an average of 1.66 children. This ranges from a low of 1.37 for Inuit through 1.51 for non status Indians, 1.63 for Métis to 1.72 for status Indians (non aboriginals have an average of 1.31). For the younger lone parents (aged 15-19), the average number of children is 1.08 for non status Indians (the same as for non aboriginal), 1.20 for Inuit, 1.25 for Métis, and 1.37 for status Indians.

The average number of children for female aboriginal spouses aged 15-19 in husband-wife families is 1.38 compared to 1.15 for non aboriginals. Among these very young aboriginal spouses, status Indians have the highest average number of children (1.42) and non status Indians the lowest (1.20). For the older youth, aged 20-24, aboriginal female spouses have an average of 1.87 children compared to 1.44 for non aboriginals.

Figure 6
Percentage Distribution of Aboriginal Youth Aged 20-24, by Highest Level of Schooling, Canada, 1981



Source: Appendix, Table A5.

Status Indians have the highest number of children (an average of 1.97) and non status the lowest (1.66).

Educational Attainment

The educational attainment of youth aged 20-24 is an incomplete picture since some are still attending educational institutions for post-secondary training.[3] Nevertheless, Figure 6 reflects their current attainment which shows significant differences between the aboriginal populations. For example, 40.3% of Inuit males and 49.6% of Inuit females have achieved less than a Grade 9 education. This is at least double the proportion of any other group. Non status Indians have the lowest proportion of persons with less than Grade 9; 12.6% of males and 10.6% of females, but even these rates are nearly three times those of non aboriginal youth for whom only 4.8% of males and 3.7% of females have such low levels of educational attainment. Put another way, one out of every two Inuit females aged 20-24 has less than Grade 9 compared to one out of 27 non aboriginal females.

Inuit youth also have much lower proportions who have achieved Grades 9 to 13 (including trades); 38.2% of males and 34.5% of females. All other aboriginal groups have over 55% of their population with an attainment level of Grades 9 to 13. Non aboriginals have a lower proportion with this level (just over 48%) because they have higher proportions with post-secondary levels of attainment in colleges and universities. In fact, 46.5% of non aboriginal males and 48.0% of females have attained some post-secondary level compared to only 23.6% of aborignal males and 26.4% of females. Among aboriginal youth, non status Indian males and Métis females have the highest proportions with post-secondary non university attainment while Métis males and non status Indian females have the highest proportions with university levels of attainment.

In summary, the educational attainment of aboriginal youth, particularly Inuit, is substantially below that of non aboriginal youth. Whether this reflects lack of opportunity, lack of access to facilities or the placing of a low priority upon educational attainment cannot be discerned from the presented data.

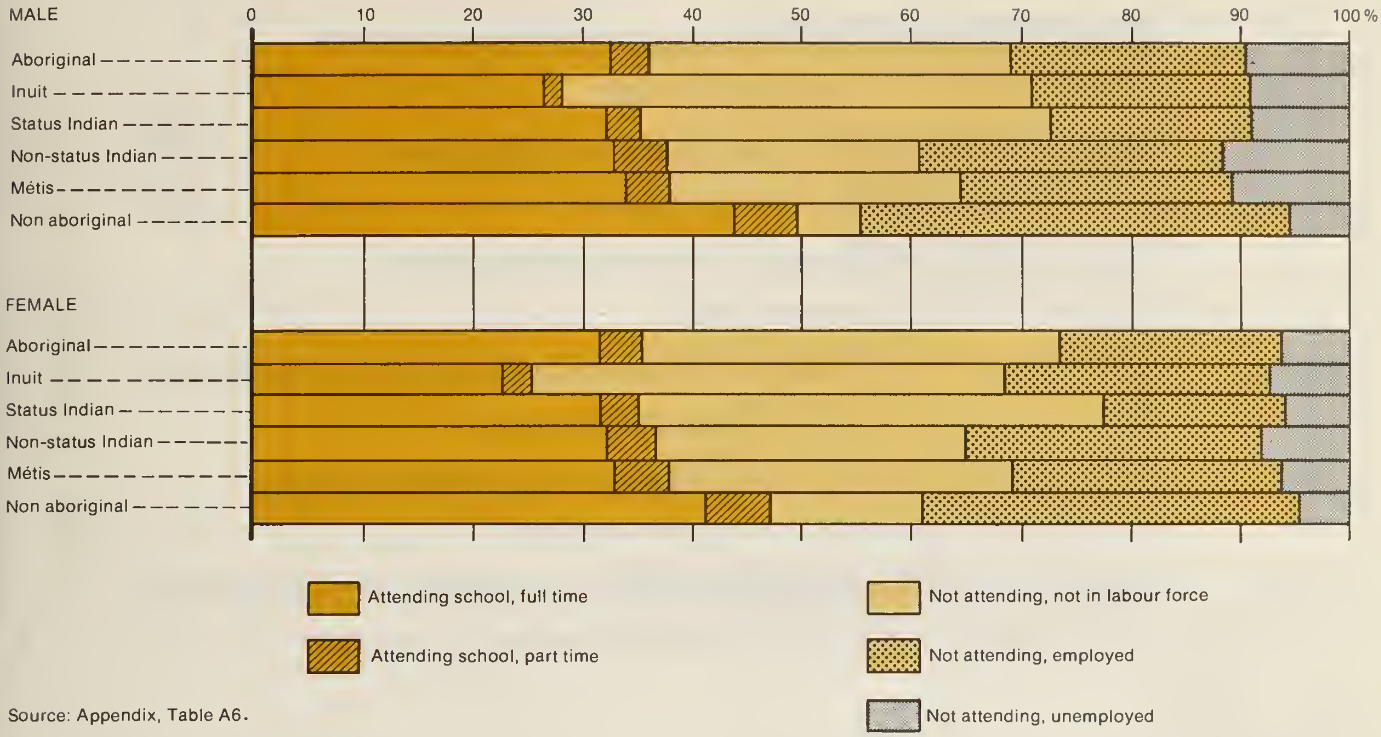
School Attendance and Labour Force Activity

If aboriginal youth have proportionally lower levels of educational attainment than non aboriginal youth then the question is raised as to whether they are failing or dropping out and what they are doing if

---

[3] Youth aged 15-19 are excluded from this analysis since considerable numbers would still be in school.

Figure 7
Percentage Distribution of Aboriginal Youth Aged 15-24, by School Attendance and Labour Force Activity, Canada, 1981



Source: Appendix, Table A6.

they are not in school. As was seen earlier, for females at least, relatively more aboriginal youth are involved with childrearing which, while not precluding activity in the labour force, would tend to reduce levels of participation. Figure 7 shows the proportion of youth who are attending school, full-time and part-time and, for those not attending school, whether they are in the labour force and are employed or unemployed. It should be noted that this distribution of the population should not be confused with labour force participation rates which are based on the whole population (aged 15 and over), regardless of whether or not an individual is attending school. Similarly, the distribution of the population shown as employed and unemployed should not be confused with employment or unemployment rates which are calculated only on the population in the labour force.

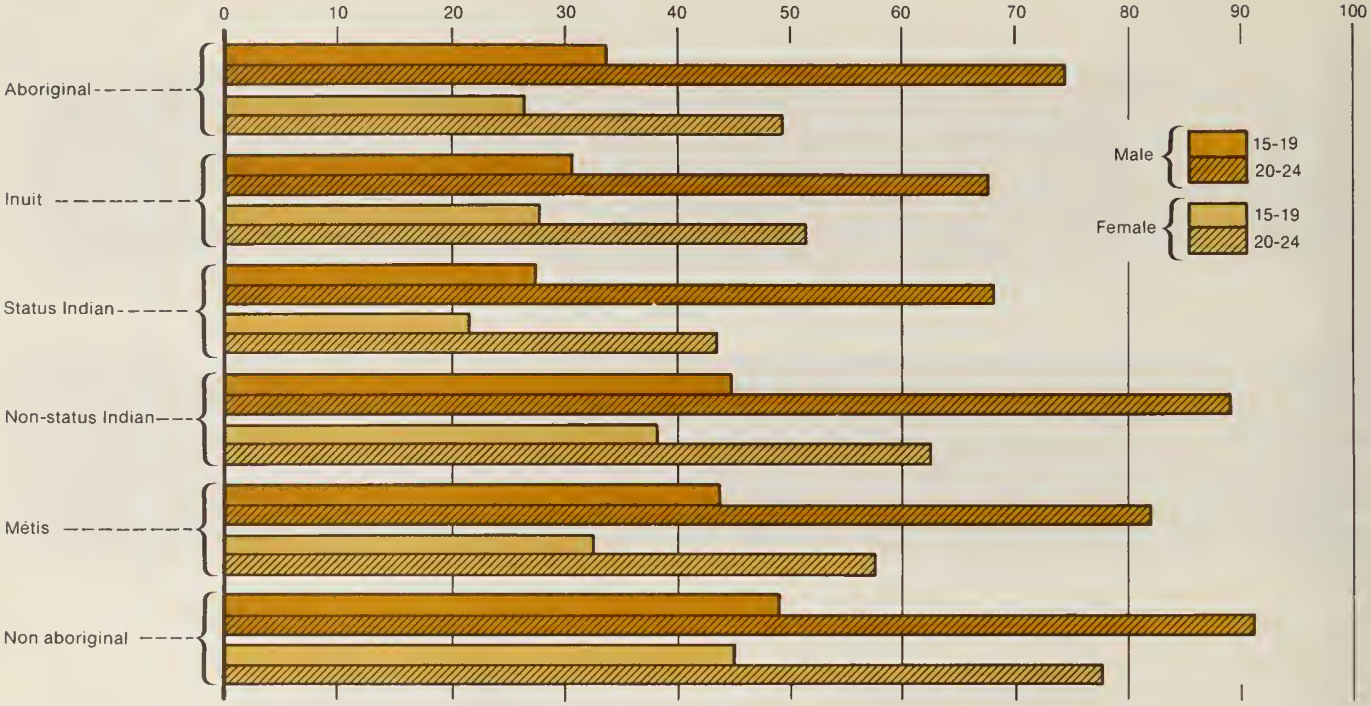
Generally, all females have a slightly lower proportion of their population attending school full-time than males, but slightly higher proportions attending part-time. This may be related to childrearing. For both sexes, Inuit have relatively fewer youths in school than other aboriginal groups: 27.7% of males and 25.3% of females. Differences between the other aboriginal groups are minor compared to non aboriginal youth for whom 49.3% of males and 47.0% of females are still attending school. Clearly, the earlier dropping out of aboriginal youth affects their educational attainment as noted in the previous section.

For those youth who are not in school and not in the labour force, there are marked differences between males and females, between aboriginal and non aboriginal, and among the aboriginal groups themselves. For all groups, more females than males are not in school and not in the labour force which no doubt reflects childrearing. Close to one in four male aboriginal youth are not in school and not in the labour force compared to one in 17 non aboriginals. For females 38.1% of aboriginals are in this situation compared to 13.8% of non aboriginals. Inuit have the highest proportion of males (33.6%) not in school and not in the labour force, followed by status Indians (28.4%), Métis (15.7%) and non status Indians (11.9%). For females, Inuit have the highest proportion (43.0%), only slightly higher than status Indian at 42.3% and trailed by Métis (31.3%) and non status Indian (28.2%).

The percentage of the population not in school and employed is consistently higher for males than for females and for non aboriginal youth than for aboriginal youth. Among the latter, status Indians, both males and females, have significantly lower

Figure 8

Labour Force Participation Rates, Aboriginal Youth Aged 15-19 and 20-24, Canada, 1981



Source: Appendix, Table A7.

proportions employed than other groups. Specifically, only 27.5% and 16.8% of status Indian males and females are not in school but employed. Non status Indian youth, both males and females have the highest proportion employed (39.3% for males and 27.0% for females).

For those who are not in school, who are in the labour force but are unemployed, there are again marked differences among the populations under review. Non status Indians have the highest proportion of their population in this category (compared to other groups): 11.7% of males and 8.2% of females. Status Indians, both males and females, have the lowest of the aboriginal youth (9.0% and 6.0% respectively). Non aboriginal males are 5.7% and females 4.8%.

In summary, Inuit youth have the highest proportion "not in school" and "not in school and not in the labour force". Non status Indian youth have the highest proportion in the labour force, both employed and unemployed.

Labour Force Participation Rates

Labour force participation rates refer to the percentage the total labour force forms of a total population. The rate, therefore, reflects that proportion of a population which is in the labour force. As might be expected participation rates tend to be lower for populations where there is high mobility in and out of the labour force, for example, youth who are entering and retirees who are leaving. For this reason the youth are examined in two age groups, 15 to 19 where participation rates might be expected to be lower since school attendance is higher and 20 to 24 where rates would be expected to climb as school attendance declines.[4]

Figure 8 shows participation rates for both age groups and reflects a significant increase in participation for the older group, for example from 49.0 to 91.2 for non aboriginal males. For both groups, participation rates are consistently higher for males than for females. For the younger youth (15-19), non status Indian males have the highest rate among aboriginal youth (44.9), somewhat lower than non aboriginal youth (49.0). Status Indian males have the lowest rates (27.5) as do status Indian females (21.5), non status Indians have the highest rates for aboriginal females (38.1).

For the older group (20-24) rates increase significantly but non status Indians continue to have the highest rates among aboriginal youth. In fact, non status Indian male rates almost equal those of non aboriginal (89.0 and 91.2). Although, non status Indian females have the highest rates among aboriginal females (62.3) they do not approach non aboriginal female rates of 77.8. For the younger group, the lowest rates are found among status Indian males and females 27.5 and 21.5 respectively. For the older group status Indian females have the lowest rate (43.5) but Inuit have the lowest rate for males (67.8) only marginally lower than status Indians (68.1).

---

[4] The two should not be considered mutually exclusive, however, since many students may also be in the labour force.

Unemployment Rates

Unemployment rates refer to the percentage the unemployed force forms of the total labour force. The rate, therefore, reflects that proportion of the labour force who wish to be employed but do not have a job.

As seen in Figure 9, unemployment rates are significantly higher for youths aged 15-19 than for those aged 20-24, reflecting both the lower educational attainment and the lack of experience of the younger group. For both age groups, rates are significantly lower for non aboriginal youth than for aboriginal youth. For example, for the group aged 15-19 unemployment rates are 14.9 for non aboriginal males but 27.4 for aboriginals. The highest rates among these young people is found among status Indian females (32.3) and Inuit males (29.4). For status Indians and non aboriginals, rates are higher for females than for males. For all other aboriginal groups rates are higher for males.

Of the older youth, unemployment rates are consistently higher, albeit slightly, for females than for males except for Métis where the males have the higher rates. Status Indians, both males and females, have the highest rates of 20.6 and 21.7 respectively while female Métis and male Inuit have the lowest rates of aboriginal youth (16.5 and 16.9). Non aboriginal youth have considerably lower rates of 11.3 for males and 11.4 for females.

Income

Figure 10 shows the major source of income for older aboriginal youth. It clearly reflects significant sex-based differences with substantially more females with no income or dependent upon government transfer payments. Higher proportions of females than males with no income undoubtedly reflect females who are spouses and rearing children. Many of the youth with no income, both females and males are, of course, those who are still going to school and dependent upon parents. Higher proportions of females dependent upon government transfer payments for the major source of income will, in many cases, be lone parents who are raising children and probably not in the labour force.

Among aboriginal youth Inuit (both males and females) have the highest proportion of their population with no income (14.8% and 31.5% respectively) followed by status Indians and Métis. Non status Indians have the lowest proportions: 5.5% of males and 17.0% of females. This is somewhat higher than for non aboriginals which is 4.2% for males and 12.1% for females.

Dependency upon government transfer payments runs highest among status Indian females at 24.6% of the population. They are followed by status Indian males (19.0%), Métis females (18.3%), non status Indian females (16.3%) and Inuit females (10.1%). Other aboriginal males and both male and female non aboriginals all run at less than 10%.

Dependency upon wages and salaries is highest for non aboriginal males (86.3%), only slightly ahead of non status Indian males (85.7%) and Métis males (83.0%). The lowest dependency upon wages and salaries is for status Indian females (44.3%), Inuit females (55.9%), Métis females (60.7%), non status Indian females (65.2%) and status Indian males (67.5%).

These figures, of course, relate closely to labour force participation rates and ultimately to educational attainment.

Table 3 shows the relationship between educational attainment and income for the older youth (aged 20-24). It must be interpreted with caution, however, since those seeking advanced training in university or other post-secondary programs will have had relatively less work experience than those who entered the labour force directly from high school and, therefore, initial salaries may be lower.

Furthermore, for those still enrolled in post-secondary programs, income may come from only part-time or seasonal work. Nevertheless, the very low incomes of those with less than Grade 9 education and the improved situation of those with trades training is clearly seen.

As might be expected, average income increases substantially for persons with Grades 9 to 13, compared to those with less than Grade 9, and again for those with trades qualifications. It is also clear that obtaining training in trades can significantly improve income for aboriginal youth. For example, male aboriginal youth with less than

[1] This average income may be a function of the very small population reporting.

Note Averages are calculated on the population with income only.

Source: 1981 Census of Canada, unpublished data AY12.

Grade 9 earned only 54.5% of the income of their counterparts with trades training. Non aboriginal males with less than Grade 9 earned 71.6% of the income of those with trades. Put another way, aboriginal males with less than Grade 9 earned an average of $5,683 or 67.0% of the $8,479 earned by non aboriginal youth with the same level of education. On the other hand, aboriginal males with trades training earned an average of $10,421 or 88.0% of the $11,836 earned by non aboriginal youth with trades. Whether income differentials between aboriginal youth and non aboriginal youth are a product of some form of discrimination or related to some other factor such as subsistence economies or barter economies vs. money economies or geographic location (aboriginal youth having a higher rural base and non aboriginals having a higher urban base) cannot be addressed by the available data but it is evident that advanced training in the trades can significantly reduce income differentials between the two groups.

Industry

Table 4 reflects the industry (i.e., the kind of business, establishment or service) in which aboriginal youth are active. Sex-based differences are immediately evident with males dominating in primary activities, manufacturing, construction, and transportation. Females dominate in finance and in commerce, business and personal service, and generally in trade.

For males, Inuit lead other aboriginal groups in primary activities, transportation, finance and public administration but assume the lowest rates in manufacturing and construction. For aboriginal people, non status Indian males have the highest proportions in manufacturing, trade, and commerce, business and personal service. Métis, have the highest proportion in construction.

For females, non status Indians have the highest proportion of persons in manufacturing while Inuit have the highest in trade. Métis have the highest proportion in commerce, business and personal service while status Indians have the highest in public administration.

Compared to non aboriginals, aboriginal males generally have higher levels of activity in primary industries, in construction and in public administration. Non aboriginals have higher levels in manufacturing, trade, finance, and in commerce, business and personal service. Aboriginal females have higher levels in primary activities, public administration, and in commerce, business and personal service. Non aboriginal females have higher levels of activity in all other fields.

Summary

Demographic profiles reveal that a high proportion of aboriginal persons are dependent. That is, they are under 15 years of age or 65 or over (44.4% of the males and 42.1% of the females). This means that aboriginal youth must begin assuming a considerable burden in terms of helping support that dependent population. In this regard they face a much greater challenge than their non aboriginal counterparts for whom only about 32% of the population are dependent. To compound the problem, high proportions of aboriginal youth live in rural areas where services and facilities for dependent populations may not be readily available (e.g., easily accessed schooling, nursing care and special housing for seniors) which places greater responsibility on family. Stable economic opportunities may be less in rural areas which might explain relatively high mobility rates of aboriginal youth.

While dependent children form a large part of aboriginal society, dependent youth do not. Compared to non aboriginal youth, relatively large proportions of aboriginal youth leave the family nest to become non family persons or husbands, wives or lone parents in their own right. Furthermore, relatively high proportions of them begin their own childrearing during this stage of their life cycle, and they have more children than their non aboriginal cohort, ironically further increasing the dependency ratio.

The degree to which the dependency ratio itself puts pressure on youth to leave the dependency ranks themselves is not known but as they leave the family nest so do they leave educational programs. Here is another irony, since improved educational levels offer them the greatest hope to improve their own situation and chances to meet future challenges. However, educational attainment of aboriginal youth is significantly lower than non aboriginal youth. This would perhaps be more understandable if aboriginal youth were leaving school to join the labour force (and thus lessen the dependency ratio). Approximately one-third of aboriginal youth (23.6% of the males and 38.1% of the females) are not attending school and are not in the labour force. Unless they are involved in some subsistence economy which is not reported as labour force activity, and are not attending school as a means to improving future labour force activity chances, then they clearly further swell the ranks of the involuntary dependent children and senior citizens. Whether they are dependent upon their families, or some other segment of society, is not entirely clear from the data presented although significant numbers are dependent upon government transfer payments for their major source of income. Perhaps most critical, however, is the apparent lost opportunity to seize advantages that can be gained through education. For example, where aboriginal youth have attained training in the trades, their income is generally close to double that of those with less than Grade 9 education. In effect, higher education has a far greater pay off, in terms of net income improvement, for aboriginal youth than for non aboriginal youth.

Unfortunately, for all youth who leave school and even for those who do join the labour force, unemployment rates are high. But for youth aged 15 to 19 and especially aboriginal youth, they are incredibly high (over 27%).

One must ask, therefore, what the incentives are for leaving school, if it means high unemployment and high levels of labour force inactivity? On the other hand, what are the incentives for staying in school? Perhaps, some of the advantages, as seen here in increased earnings, are not generally known. Or perhaps, appropriate job opportunities simply do not exist in local aboriginal communities. Perhaps education only provides improved employment and income opportunities in distant urban areas of which the youth has no knowledge and in which he or she has no family, no friends, no experience and no one to provide a role model. How can one aspire to something one does not know? If, indeed, aboriginal youth must leave their local communities in order to gain economic advantage then will they lose their culture and become assimilated into the larger society? "Traditional" aboriginal society and economies have been changing and evolving for hundreds of years but for better or worse the clock cannot be turned back. It would seem that there are choices for aboriginal youth, but no easy answers.

Gross National Product
Second Quarter 1985

Preliminary estimates indicate that nominal Gross National Product, seasonally adjusted at annual rates, rose to a level of $449.3 billion in the second quarter of 1985, an increase of 1.9% over the first quarter. After allowing for a moderate price change of 0.9%, this represents an increase of 1.0% in real GNP.

The 1.0% gain in real GNP is a continuation of similar growth rates in the previous two quarters of 0.9% and 1.0% respectively. Final domestic demand has strengthened over this period, and was up 1.7% in the second quarter, the largest quarterly increase since 1980. The improvement in final domestic demand, however, was partly offset by a slackening of external demand and lower rates of non-farm business stock accumulation. Consumer demand continued to rise steadily into the second quarter, while there was a marked upturn of both residential and non-residential construction expenditures in the quarter.

Business investment in plant and equipment rose by 4.0% in volume, the largest quarterly gain since 1981. Most of the increase originated in outlays for non-residential construction, up 8.0%, with particularly large increases in investment in the manufacturing and energy sectors. On the other hand, expenditures on machinery and equipment rose only 0.7%. The increase in investment is broadly consistent with the results of the 1985 mid-year survey of Private and Public Investment Intentions.

Residential construction jumped by 8.4% in volume in the second quarter, after seven quarters of declines or minimal growth. The gain originated in new housing construction as well as in continued growth in sales of existing homes. Together with gains in the non-residential sector, increases in investment accounted for about 50% of the growth in final domestic demand.

Following two consecutive quarterly gains of similar magnitude, consumer demand again grew by 1.2% in the second quarter. Among expenditure components, consumer demand has contributed the most to the growth of real GNE over the past three quarters (slightly over 80%). Growth in the major components of personal expenditure continued to vary widely from quarter-to-quarter. Spending on semi-durable and non-durable goods subsided from large rates of increase in the first quarter whereas outlays for durable goods rose by 3.8%. The gain in expenditure on durable goods was widespread, with the largest increases for new motor vehicles as well as home appliances. Higher spending on consumer goods coincided with a softening of prices; the implicit price index for goods rose only 0.5%, compared to 1.1% in the first quarter.

Following a 0.8% growth in the first quarter, real exports of goods and services declined by 2.3%. Merchandise exports recorded consecutive declines of 0.5% and 1.7% in the first and second quarters, respectively. The softening of exports over the past two quarters has been most pronounced in end products (notably automotive shipments to the United States) and in shipments of crude materials, such as metal ores. Total import demand declined by 2.5% in the second quarter. The decrease was most evident in service imports, reflecting a very large decline in dividend payments. The slight decline in merchandise imports was mostly confined to motor vehicles and parts.

The volume of non-farm business inventories was little changed in the second quarter, after a $1.2 billion accumulation in the first quarter and a slight decrease in the fourth quarter. Stock levels of durable goods were cutback at the manufacturing and retail levels, as much of the demand for autos was drawn from retail inventories. This was counterbalanced by increases in stocks held at the wholesale level and at the non-durable manufacturing and retailing levels.

In terms of factor incomes, wages, salaries, and supplementary labour income grew by 1.6%, in line with the gains recorded in the previous three quarters. Corporate profits before taxes edged down by 3.6% in the quarter, notably in the manufacturing and finance industries, and are up marginally from a year ago.

Personal income rose by 2.0% in the quarter, about the same rate as in the first quarter. With personal expenditure rising at a somewhat lower rate and personal income taxes increasing by 1.7% after the sharp first quarter decline, the personal savings rate remained virtually unchanged at about 14%.

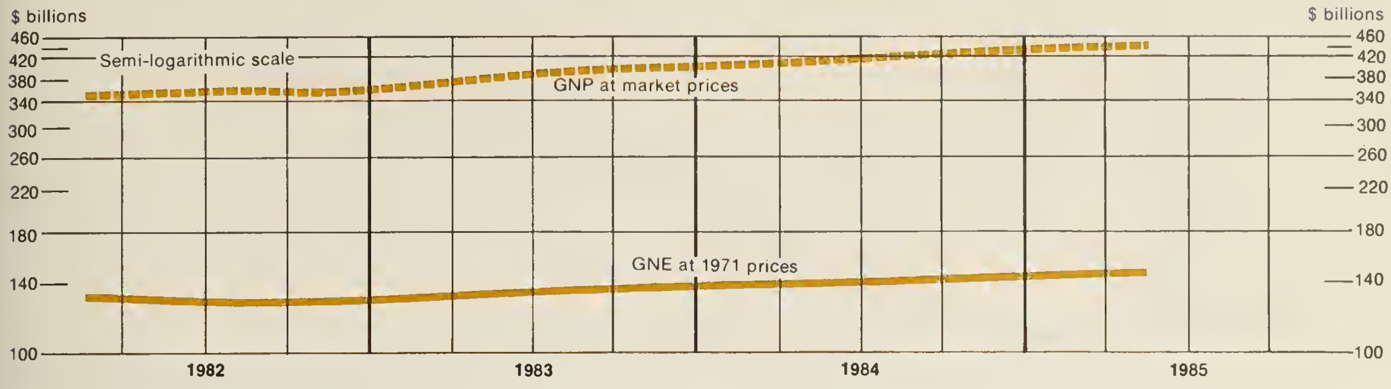
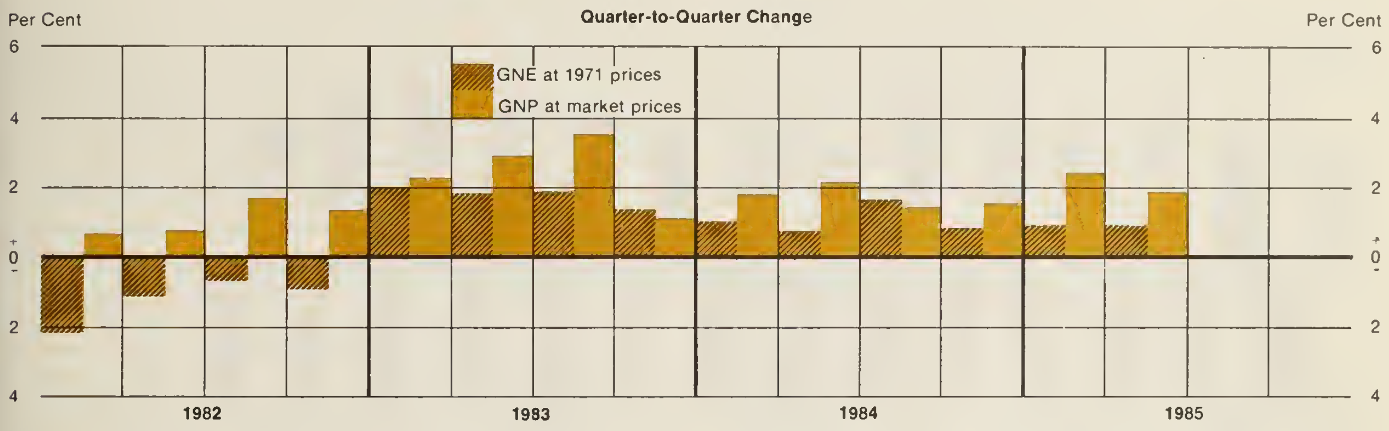
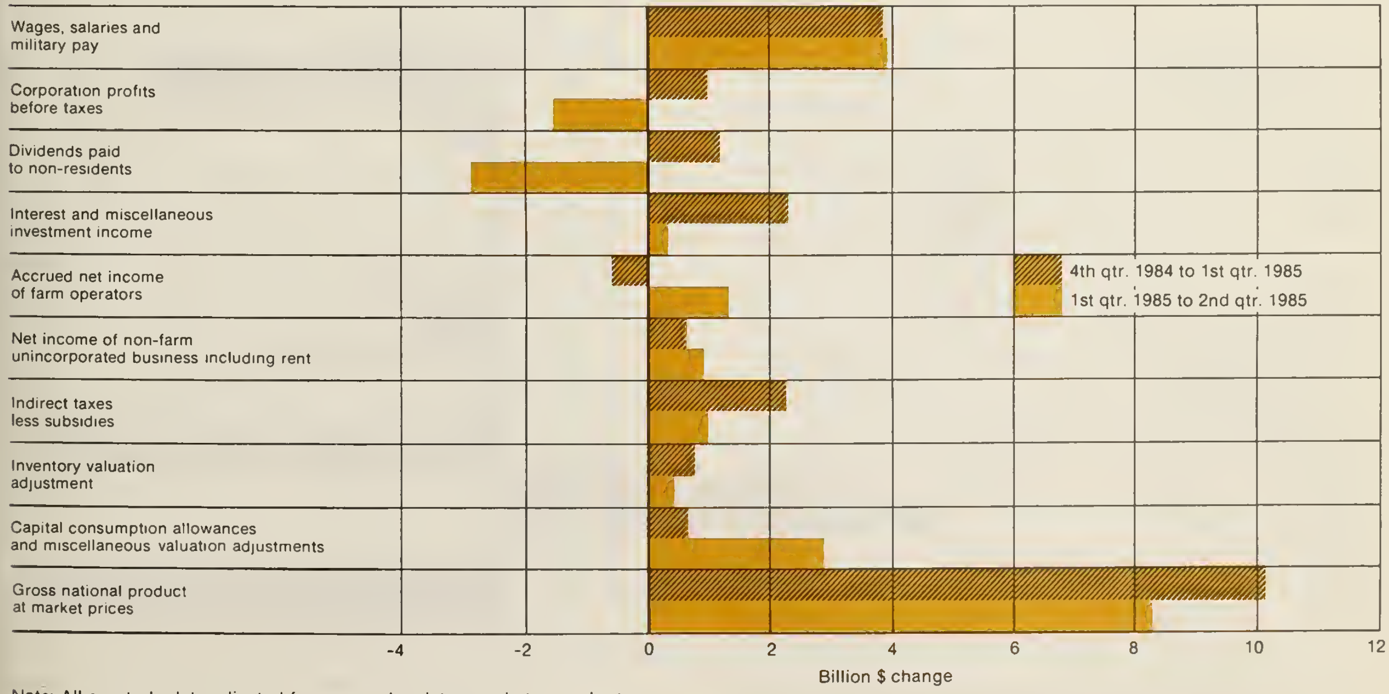
Gross National Product, seasonally adjusted at annual rates, rose to a level of $449.3 billion in the second quarter of 1985, an increase of 1.9% over the first quarter. After allowing for a moderate price gain of 0.9%, real GNP increased 1.0%.



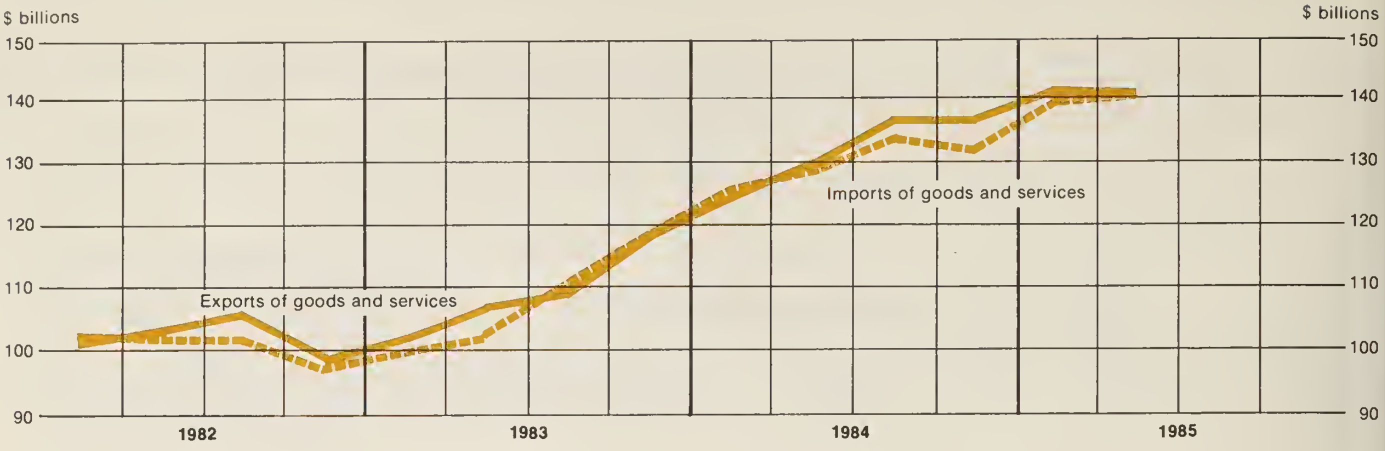


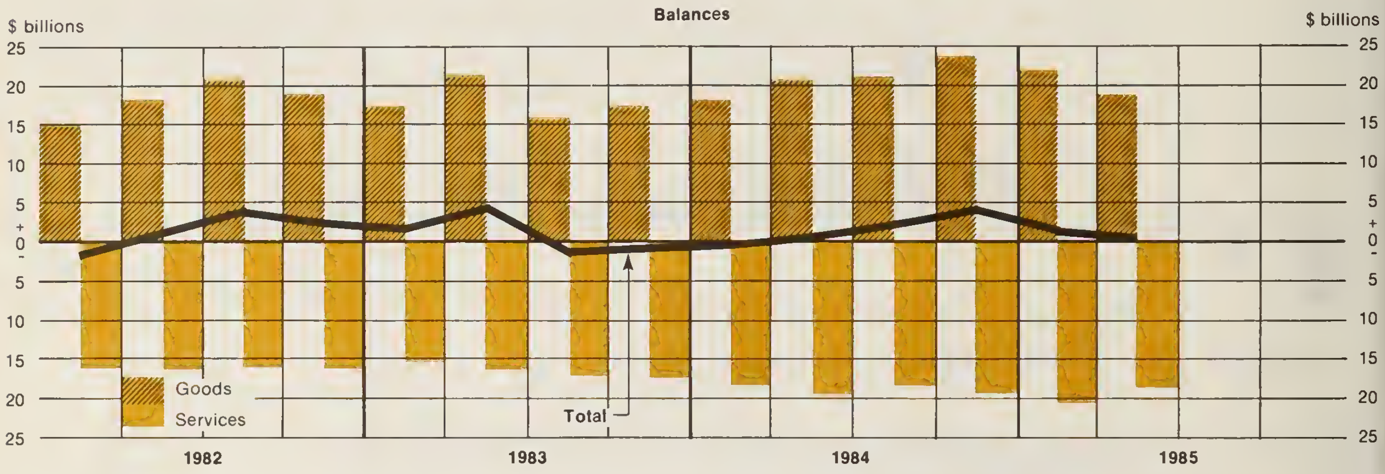
Wages, salaries and supplementary labour income and military pay and allowances advanced 1.6%, the same rate as in the first quarter of 1985. Corporation profits before taxes fell 3.6% after a 2.5% gain in the previous period. Interest and miscellaneous investment income showed a small gain.



Note: All quarterly data adjusted for seasonal variation and at annual rates

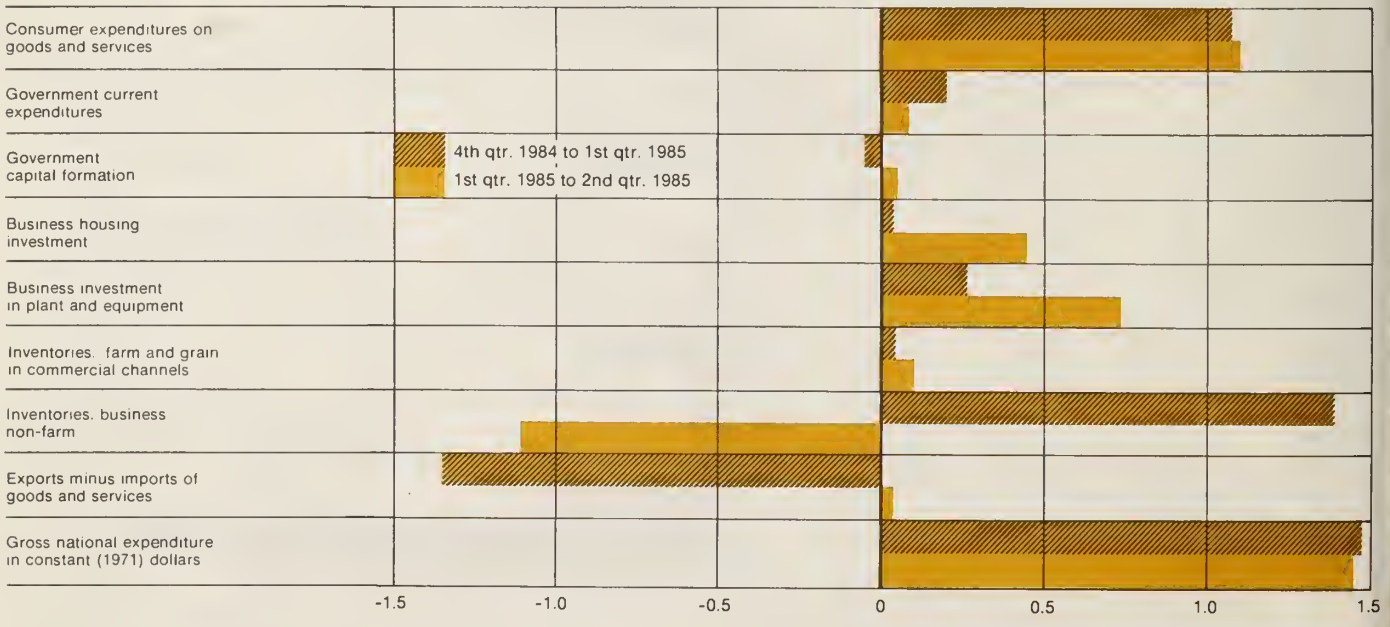
Imports of goods and services rose 0.6% while exports fell 0.4% in the second quarter of 1985. The balance in goods and services reached $0.2 billion, down $1.4 billion from the first quarter level.





Following two consecutive quarterly gains of similar magnitude consumer demand again grew by 1.2% in the second quarter. While the volume of non-farm business inventories changed very little, business investment in plant and equipment rose 4.0% in volume, the largest gain since 1981. Real imports of goods and services fell more sharply than exports.

Quarterly changes in GNE and components in constant (1971) dollars



Note: All quarterly data adjusted for seasonal variation and at annual rates

Financial Activity in Canada — Second Quarter 1985, Preliminary

Activity on conventional credit markets in the second quarter resumed a level more characteristic of recent years. Funds so raised by domestic non-financial sectors declined to $16.0 billion, compared to $21.3 billion in the first quarter (see Text Table 1). This drop was more a reflection of the relative strength in the first quarter than a pronounced weakness in the second. Compared with the equivalent period in the year earlier, when $16.5 billion was raised, the decline is much more modest.

The one percent growth in real Gross National Expenditure was attributable in large measure to a marked pick-up in gross fixed capital formation and consumer expenditure, particularly for durables and semi-durables. On the other hand, net exports showed a drop from the pace of recent quarters, while non-farm inventories registered a large decline. In the light of these developments on the real side of the economy, changes in financing activity are more readily explicable.

Non-financial private corporations showed the single largest drop in raising net new funds. Whereas in the first quarter this sector accounted for almost 39% of the funds raised on these markets, some $8.3 billion, in the second quarter, its share had fallen to only 13%, or $2.1 billion, which was virtually unchanged from the equivalent period in 1984. Two features are apparent from the financing: short-term paper and bank borrowing fell, in the order of $1.9 billion, while longer term funds rose by $3.5 billion. The movement in short-term paper and bank borrowing over the first two quarters of the year reflected the movements in inventories by this sector. In the first quarter, inventories had risen sharply, in line with sharply higher short-term borrowing; in the second quarter, inventories fell, as did borrowing through these instruments. At the other end of the maturity spectrum, the increased bond financing ($0.8 billion) and continuing strong equity issues ($2.5 billion) reflected the increased capital formation (up $2.2 billion from the first quarter), as well as the on-going substitution of long-term for short (and often floating rate) capital. Stock markets remained strong, while bond prices rose sharply. Of the share issues, two thirds were preferred and only one third common, about the same ratio as the first quarter. Those industries showing the major issues were: mining (16%), petroleum and coal (14%), chemicals (14%) and primary metals (11%). Of the gross new bond issues of $1.4 billion, mining accounted for 32%, pipelines 24%, and communications 9%. Almost three quarters were in Canadian dollars, with most of the balance in U.S. dollars. Seventy percent of the issues had terms to maturity of ten years or more.

In contrast to non-financial private corporations, the household sector increased its borrowings by $5.1 billion, up from the previous quarter's $2.6 billion, but remained at about the same level as the second quarter of 1984. In line with the strength in expenditures on durables, consumer credit registered its strongest gain since the second quarter of 1979. Most of the lending was from the chartered banks. Net new mortgage borrowing by households amounted to $3.4 billion, reflecting the continuing pattern of the past several years of strength in this instrument in the second quarter. This increase appeared to reflect activity in the existing housing market as much as the pick-up in new housing. Non-consumer credit bank borrowing fell $0.4 billion, being largely repayments of loans for the purchase of Canada Savings Bonds. Households continued the pattern of recent quarters of being the major purchasers of Government of Canada Treasury bills, acquiring $2.4 billion, reflecting the increased access to this instrument through the sale (by investment dealers) of smaller denominations.

Borrowing by general government (federal, provincial and local governments and hospitals — Sectors X and XI) amounted to $9.3 billion, 58% of the funds raised by non-financial domestic sectors with conventional credit instruments. These borrowings were up from $8.7 billion in the previous quarter and $8.1 billion in the second quarter of 1984, reflecting the higher deficit of $11.8 billion, of which $9.2 billion (or 8.3% of GNE) was attributable to the Government of Canada. The semi-annual deficit was $20.3 billion, up from $17.2 billion in the first half of 1984, reflecting in part, higher tax refunds, higher expenditures of defence, subsidies, interest on the public debt and transfers to persons. Federal direct personal taxes, not withstanding the higher refunds, and indirect taxes registered increases on the revenue side. The federal government raised $4.1 billion from issues of Treasury bills, up from $2.6 billion in the previous quarter but down from $5.0 billion in the second quarter of 1984. The federal government repaid U.S. $750 million of the U.S. $1 billion that had been borrowed from a consortium of non-resident banks in the first quarter, being part of the funds raised to buttress the country's international reserves. This brought the amount outstanding to these institutions to U.S. $250 million. At the same time, a further U.S. $100 million was borrowed from Canadian chartered banks. The federal government's recourse to the bond market rose sharply: marketable bonds produced $4.8 billion in net new funds, compared with $3.7 billion in the first quarter and only $2.5 billion in the same period in the year earlier, ($1.3 billion in Canada Savings Bonds were redeemed, the same as the previous quarter). Of gross new issues by the Government of $5.1 billion, almost a quarter had terms to maturity of twenty years or more, (virtually the same as the previous quarter), while more than a fifth had terms of between ten and twenty years, down from a third in the first quarter. All new issues were in Canadian dollars. Provincial governments raised $4.1 billion in bond issues, of which $1.0 billion was sold to the Canada Pension Plan. Of the marketable issues, nearly 80% had terms to maturity of ten years or more. Approximately three quarters of these issues were in Canadian dollars, with the U.S. dollar (13%) and the Japanese yen (10%) accounting for most of the balance.

Non-financial government enterprises reduced their claims to conventional capital markets by $456 million. Although the provincial enterprises continued to scale down their capital formation, and thereby their demands on capital markets, the major reason for the decline was the repayment of a substantial part of Canadair Financial Corporation's debt, by its assumption (and partial repayment) by the Government of Canada. (In view of the special nature of this transaction, an explanatory note on its treatment is given at the end of the text).

During the second quarter, the chartered banks saw their booked-in-Canada balance sheets fall quite sharply. The only items to record significant increases were consumer credit ($1.2 billion) mortgages ($1.1 billion) and foreign investments ($1.6 billion). Loans, (-$1.6 billion) and foreign currency deposit assets (-$5.4 billion) and liabilities (-$5.6 billion) all fell substantially, reversing large increases in the first quarter. The latter two appear to have been largely with non-residents. During the quarter, funds were made available to the Canadian Commercial Bank by six other banks, the Government of Canada, the Province of Alberta, the Canada Deposit Insurance Corporation (CDIC) and the Bank of Canada. The latter institution provided funds in the form of advances, recorded as an "other loan" liability, whereas the CDIC's advances have been registered as deposits. The other principals purchased loans amounting to $180 million. The transactions with the other banks net out to zero whereas the governments' purchases have been recorded as "other assets".

During the quarter, yields eased, falling on average about one percentage point, reversing the upward tick that had occurred in the first quarter. At that time, yields had risen in the United States, with the result that the U.S. dollar had risen to recent or record highs against most major trading currencies. In the second quarter, however, there was a return to falling yields as rates in the United States fell with the growing evidence that the economy was slowing. Yields did not fall by as much in Canada, with the result that the uncovered differential on thirty-day paper rose about one percentage point to about 170 basis points by the end of June. This widening helped the Canadian dollar to appreciate from the record low of 71.07 cents U.S. recorded in March, to close the quarter at 73.64 cents U.S. At the longer end of the market, yields on Canada bonds fell below 11% for the first time since 1979.

Note on treatment of Canadair Financial Corporation.

The assumption of $774 million (U.S. $410 million and $200 million Canadian) of Canadair Financial's debt by the Government of Canada has been treated as a capital transfer. As there is no such explicit category in the Financial Flows system, Category 1800 ("Net purchases of existing and intangible assets") has been used. This treatment is consistent with similar situations such as forgiveness of debt by the federal government. (This treatment will mean that the net borrowing requirement for the federal government will be substantially different from the deficit recorded on Table 6 of the National Income and Expenditure Accounts). Having assumed this debt, U.S. $297 million was repaid toward the end of the quarter, drawing on Canada's reserves. As a result, only that portion that was still outstanding at the end of June appears as an increase in the federal government's debt.

he Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating sectors nd by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximation o final borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of the ntermediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides the nduplicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financial nstitutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised=Total Funds Supplied) reflects the basic identity that he change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the same nstrument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 and n the Canadian Statistical Review, March 1977.

1) Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Federal Government bond debt are netted out: the asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bond figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).
2) Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 3530) consists mostly of shares, it is classified to Stocks.
3) The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) less the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total funds supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability side equals the sum of the two on the asset side; however, stocks alone do not balance because stocks on the liability side include shares issued to associated enterprises (included in corporate claims on the asset side).

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

Source: Research Bulletin, Labour Canada.

Table 9: Total number of employees, by industry group, all survey units, Canada, based on the 1970 standard industrial classification

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

Year and month	Total shipments	Non-durable goods industries											
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

	Inventories owned				Inventories held: Total			Inventories held: raw materials						
	Consumer goods							Consumer goods

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of ell imports and exports.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleadin indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Statistics Canada Statistique Canada

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Credit card only (973-8018)			

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- R. Platek — Director, Census and Household Survey Methods Division
- J.G. Stinson — Director, CANSIM Operations Division
- G.J. Brackstone — Director General, Methodology Branch
- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 2—Table 2: Immigration to Canada, by country of last permanent residence

This table has been re-structured. We have removed the countries pertaining to Europe and have replaced them with Total Europe (D41), and a new selection of countries have been added; India (D125590), Hong Kong (D125591), Vietnam (D125592), Philippines (D125593), Other Asia (D125594), Africa (D125596), Other North and Central America (D125597), and South America (D125598).

Monthly or quarterly data may not add to totals due to rounding.

Section 12—Table 4: Urban transit operating statistics, Canada

The series "Propane Used (D462101)" has been removed with this issue.

Section 13—Table 4: Cheques cashed in clearing centres

This table has been discontinued and removed with this issue. We have replaced it with a new selection of series for "Business bankruptcies and liabilities, by type of industry, Canada".

Growth and Change in the Financial System[1] — Some Evidence From The National Balance Sheet Accounts, 1961—1984 *

The growth of financial institutions implies an expansion of indirect financing[2] relative to direct financing[3]. Intermediation has evolved largely because of the growth of income and savings and the increased demand for/supply of new financial products and services. The financial system tends also to promote its own growth through layering[4] — the amount of financial institutions liabilities (including shares) that are held as assets by other financial institutions.

An appropriate indicator of the growth and the size of the financial system is the financial intermediation ratio — the ratio of the financial assets of financial institutions to total (economy-wide) financial assets. This ratio has increased steadily in the period under review (see Chart 1). The sharpest growth occurred in the period 1971 to 1976. The ratio of financial assets of financial institutions to GNP also indicates substantial growth in financial institutions over this same period (see Chart 2). Layering has likely contributed to the growth in the financial system, but the data do not allow for the construction of a good indicator of this phenomenon.

The combined balance sheet of the financial sectors (in percentages) can be used as a basis for highlighting some of the structural changes in the financial system from 1961 to 1984 (see Table I). Liabilities have largely shifted from life insurance and pensions into currency and deposits, indicating a more rapid growth of deposit-taking institutions relative to the insurance industry. Financial assets dominate the asset side of the balance sheet, averaging 96.0% of total assets. Consumer credit, loans and mortgages have increased their share in assets from 40.9% in 1961 to 50.1% in 1981. Excluding short-term paper and shares, marketable securities' share in total assets has declined sharply from 34.3% in 1961 to 13.7% in 1984. In this group, the sharpest drop was in Government of Canada bonds, 12.1% to 2.6%.

Total financial assets are used to compare the relative shares of the different financial sectors in the financial system (see Table II). It is evident that the growth of the insurance industry has been considerably less than that of the other financial institutions, resulting in a significant loss of market share. The strongest growth has occurred in the other deposit-taking institutions — the near-banks (trust companies, credit unions and caisses populaires, mortgage loan companies). This result is in line with the trend toward term deposits and Registered Retirement Savings Plans and the relative decline in the amount of personal saving through life insurance. Among the near-banks, trust companies recorded the most rapid growth. Chartered banks asset growth was also substantial, resulting in an increase in their relative share. The sector "Other Private Financial Institutions" and its subsectors recorded declines in their shares due to relatively slow growth, with the exception of the subsector "Other N.E.I.", that is dominated by holding companies which grew significantly. The share of public financial institutions rose in line with the strong growth in provincial financial

---

Chart — 1

Financial Intermediation Ratio

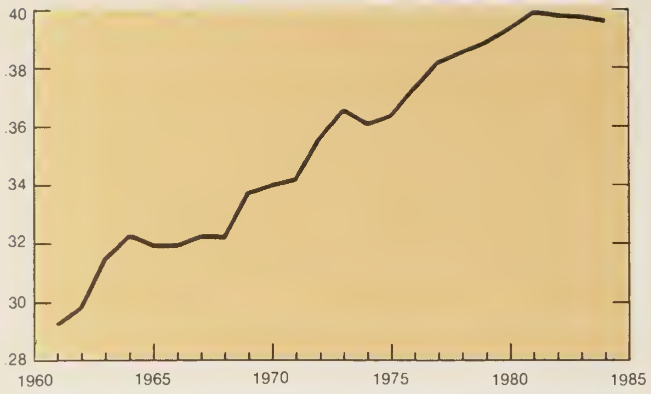

Chart — 2

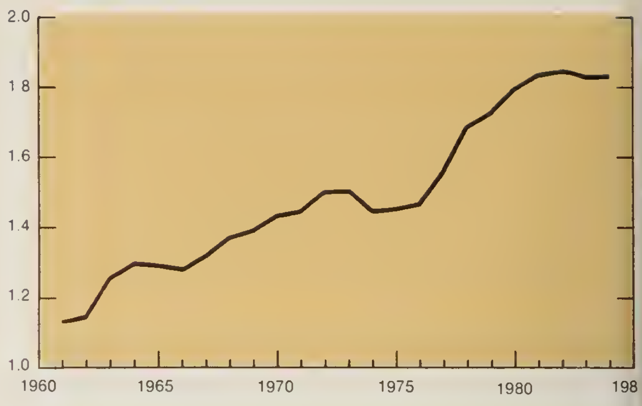
Ratio of Financial Assets to GNP



institutions. The following paragraphs will summarize some of the more salient changes in the balance sheets of the various sectors. (Table III shows the changes in their respective market shares of major financial assets).

Chartered banks' growth has to some extent been related to diversification of their activities. This diversification is reflected in the composition of their financial assets (see Chart 3) and the growth is evident in their market share of these assets. Consumer credit doubled its relative share among the banks' financial assets, and this higher profile accounts for the banks' present dominance in the area of consumer finance. Loans have increased among the assets[5], and the banks have maintained the significant share of the market in the face of increased competition from other financial institutions. Mortgage lending has declined in relative importance among the banks, but this has been offset by the growth in their mortgage loan subsidiaries. Bonds have fallen sharply relative to other assets. On the liabilities side, the major shift has been an increase in the foreign currency and deposits component from zero to 28.5% of total liabilities, reflecting a marked increase in business with non-residents[6].

Because the major liability of the near-banks is term deposits, liquidity is less of a concern than for banks. This, by itself, implies a different asset structure from the chartered banks. The major asset of the near-banks is mortgages, an asset whose term structure is in line with that of the term deposits (see chart 3). Mortgages have increased in relative importance among the financial assets, allowing this group of financial institutions to substantially increase their share of this market. The long-term growth in the demand for housing and mortgages has contributed to the growth of near-banks. Consumer credit and other loans have also become more important among the financial assets of the near-banks. This increase in lending activity came a the expense of a pronounced decline in the relative proportion of bonds.

The life insurance industry (the life business of life insurance companies and fraternal benefit societies, and segregated funds) is combined with trusteed pension plans here, because of the similarity of the type of contractual liability that they both have to persons. Their asset structure is also similar. Their major assets are bonds and mortgages (mostly non residential mortgages) in that order (see Chart 3). More recently, the financial assets are made up of an increasing proportion of shares and short-term marketable securities. These assets are slowly displacing the more traditional major assets.

The sector "Other Private Financial Institutions" is an aggregation of subsectors which produces a fairly heterogenous group of financial institutions, a the range of activities in the group is extensive ran ing from investment services to specialized service such as property and casualty insurance and business and consumer financing. The main assets of the group have changed in the period under analysis (see Chart 3). Consumer credit has declined as one of the major assets reflecting the increased competition that consumer loan companies have faced from the chartered banks. Bonds and share have also declined significantly in relative importance on the balance sheet. The major increase

---

[5] Resulting partly from the 1967 revisions to the Bank Act that eliminated the six percent interest rate ceiling on chartered bank loans.

[6] It should be noted that this sector includes domestic operations only, as data are on a booked-in-Canada basis.

1984	35.0	14.3	0.7	5.4	8.2	n/a	20.1	7.0	1.2	11.9

NOTES Sector numbering corresponds to that used in the National Balance Sheet Accounts (Cat. 13-214, annual). There has been so re-sectoring of financial institutions from 1961-1984. These changes are reflected here.

Sector VI.1 — CHARTERED BANKS (1) (2)

Sector VI.2 — NEAR BANKS
- VI.2.1 — Quebec Savings Bank
- VI.2.2 — Credit Unions and Caisses Populaires
- VI.2.3 — Trust Companies (2)
- VI.2.4 — Mortgage Loan Companies (2) (3)

Sector VII — LIFE INSURANCE AND PENSION FUNDS
- VII.1 — Life Insurance Business (4)
- VII.2 — Segregated Funds of Life Insurance Companies (4)
- VII.3 — Trusted Pension Plans

---

(1) Levels in 1981 reflect the movements of the subsidiaries of foreign banks (from Sector VIII.7 to Sector VI.1) as they became chartered banks under the new E Act.

(2) Beginning in 1984, mortgage loan subsidiaries are consolidated in the chartered bank sector, while the remaining mortgage loan companies are included with companies.

(3) Prior to 1972, mortgage investment companies are included with mortgage loan companies.

(4) As of 1977, data for segregated funds and accident and sickness operations of life insurance companies are published separately.

Short—Term Paper	—	10.0	16.1	11.7	1.5	22.9	14.0	21.7	—	0.7
Treasury Bills	61.6	41.5	0.8	1.4	1.0	2.6	9.1	10.7	0.1	2.0

(1) There has been some re-sectoring of financial institutions, from 1961 to 1984. These changes are reflected here. The reader is referred to the notes on Table II details.

among the assets is in corporate claims, in line with the substantial growth of holding companies over the last twenty-four years.

Public financial institutions were initially involved heavily in housing finance programs, but more recently, they have expanded in the areas of export financing, business financing, local government financing, and providing deposit insurance to private sector financial institutions. This expansion of activities is related to the growth of provincial financial institutions as well as the broadening of activities of the federal financial institutions. The structure of the combined balance sheet of these institutions reflects their growth and diversification (see Chart 3). In 1961 their major asset was mortgages. In 1984, the share of mortgages had fallen by 50% with loans and bonds (mostly provincial bonds) accounting for most of the change.

For the detailed statistical tables (covering all sectors and subsectors of the economy), as well as an overview of the concepts, data sources and methodology, the reader is referred to the *National Balance Sheet Accounts*, 1961-1984 (catalogue 13-214) released June 1985.

ERRATA
SEPTEMBER 1985 ISSUE

Aboriginal Youth in Canada:
A Profile Based Upon 1981 Census Data

Readers should note that there are drafting errors in Figures 4, 7 and 9 that could lead to a misinterpretation of the data. In Figure 4, 18.5% of the male aboriginal population aged 15-19 are "Non-family persons" whereas the illustration would indicate that it is about 8%. The correct values are found in Table A3 in the Appendix. In Figure 7, incorrect ranges are shown for all the male aboriginal populations who are "Not attending, not in labour force" and "Not attending, employed". Correct values are found in Table A6. In Figure 9, the position of the titles "Metis" and "Non-status Indian" has been reversed. Correct values may be found in Table A7.

Appendix Table A3 — The category Female, age group 20-24, Family status, Child shows 34.5 and should read 31.5

Appendix Table A5 — The position of the titles "Total" and "With certificate" under the heading University has been reversed. Note also, that Other non-university Total (26.5) includes, Without certificate (9.7), With trades (6.8), and With certificate (10.0).

Figures 4, 7 and 9, Appendix, Table A3 and Appendix, Table A5 have been reproduced. The corrected versions appear on the following pages.

Table A3. Percentage Distribution of Aboriginal Youth Aged 15-24[1] by Age Group, Sex and Family Status, Canada, 1981

Age group and sex	Total	Family status			
		Spouse	Lone parent	Child	Non family person
15-19					
Male	1,149,810	1.2	-	91.3	7.4
Aboriginal	28,280	2.4	0.2	78.8	18.5
Non aboriginal	1,121,535	1.2	-	91.6	7.2
Female	1,113,535	6.0	0.5	85.2	8.2
Aboriginal	29,235	11.2	2.0	68.4	18.4
Non aboriginal	1,084,305	5.9	0.5	85.7	7.9
20-24					
Male	1,137,865	26.9	0.2	49.8	23.1
Aboriginal	22,030	34.8	1.2	37.6	26.3
Non aboriginal	1,115,840	26.8	0.2	50.1	23.0
Female	1 153,850	45.7	3.4	31.5	19.3
Aboriginal	24,395	48.1	12.0	21.6	18.2
Non aboriginal	1,129,460	45.7	3.2	31.8	19.4

---

[1] Family status is tabulated for usual residents in private households located within Canada only. Therefore residents in collective households persons enumerated outside Cana and persons temporarily absent from their usual place of residence at the time of the Census have been excluded from this table.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting [4] Includes mechanical and construction [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiances and fiancees. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity

* "For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

Year and month	Total shipments	Non-durable goods industries											
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.
Sources: **Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1] Gas types are included [2] Includes producers' shipments for export [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision [2] The major groups include additional components than the selected ones shown

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001) [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001)

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)
Credit card only	(973-8018)		

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 4 — Table 6: Unemployment insurance tatistics

This table has been re-structured. We have removed the series "Trainees" (D730353) and have added the series "Beneficiaries receiving regular benefits" Unadjusted (D730603), and Seasonally Adjusted (D736531). Please note that the footnotes have been revised.

Structure, Trends and Fluctuations on the Balance Sheets of the Major Sectors in the Economy, 1961-1984. *

Introduction

The National Balance Sheet Accounts provide the stock dimension to the existing flows in the National Income and Expenditure Accounts and the Financial Flow Accounts. As such, the data are an additional set of indicators on the position of the economy, and the sectors within the economy, both at any given point or over time[1]. A cursory examination of the data in the National Balance Sheet Accounts reveals that the relative position of the various sectors has shifted over the period 1961-1984.

Reference to Text Table I will reveal the relative magnitude, and changes in magnitude, of the sectors' proportions of assets between 1961 and 1984. While all sectors have shown growth in their assets n absolute terms at rates faster than GNP, there has been a relative shift towards the corporate sector. Persons and unicorporated business have registered quite a large drop, with governments also showing a decline. Most of the countervailing increase has been assumed by financial institutions in he form of financial assets. (Part of the explanation of this growth has been due to the increased sophistication, competition and innovation of these institutions in responding to demands for financial services). Most of the change in the relative mportance in ownership of tangible assets has been rom persons and unincorporated business to non-financial corporations. On the other hand, if financial institutions are excluded, a comparison of the non-financial sectors indicates that there was a modest hift of domestically-held financial assets from govrnments to non-financial corporations and persons nd unincorporated business.

Persons and Unincorporated Business

In the National Balance Sheet Accounts, as in the Canadian System of National Accounts, what is often referred to as the household or personal sector is Persons and Unincorporated Business. Persons and Unincorporated Business accounts, on average, for about 60% of GNE through purchases of consumer goods and services. Income aside, the sector's financial position — wealth, debt and holdings of tangible assets — exert an important influence on such expenditure. What is leftover from income, after expenditure (including non-financial capital acquisition) accumulates as saving in the form of financial assets or is used to reduce outstanding debt.

Table II illustrates the changes in the sector's balance sheet by showing the percentage distribution of the various components for selected years over the period 1961-1984. The sector's total assets grew 10.5 times, from 1961 to 1984. There is just about an even split between financial and tangible assets on the sector's balance sheet, although there have been some significant year to year fluctuations in their relative shares. The growth in liabilities outpaced that of assets over most of the period, resulting in a slower growth of net worth. Liabilities rose thirteen-fold, while net worth increased ten-fold, declining from 86.6% of total assets in 1961 to 83.5% at the end of 1984. Inflation has had a marked effect on the growth of the assets and thus the net worth of this sector, and its effect is clearly evident in the case of the tangible assets.

---

* Enquiries regarding this article should be addressed to Patrick O'Hagan, International and Financial Economics Division, Statistics Canada. For the detailed statistical tables (covering all sectors and subsectors of the economy), as well as an overview of the concepts, data sources and methodology, the reader is referred to the National Balance Sheet Accounts, 1961-1984 (catalogue 13-214, annual) released June 1985.

[1] The detailed sectoring presented in the National Balance Sheet Accounts is compressed here to correspond to the more aggregated sectors in the National Income and Expenditure Accounts, except that the corporate sector is split between non-financial enterprises and financial institutions.

[1] Components may not balance due to rounding

The tangible assets of this sector, excluding land, consist largely of residential structures (51.7% at the end of 1984) and consumer durables (30.2% at the end of 1984). The relative importance of the various tangible assets on the sector's balance sheet has not shifted significantly in the period under analysis. Housing's share in tangible assets excluding land, grew most rapidly from 1971 (49.0%) to 1978 (57.0%), roughly the latter part of the period associated with the maturing of the post-war baby boom generation. The growth rate of the tangible assets as measured by the year over year change, is uneven. The strongest growth in current dollar tangible assets was clear during both periods of double-digit inflation.

The other reproducible tangible assets (excluding land) are inventories (mostly farm inventories) and capital stock (non-residential structures and machinery and equipment) associated with unincorporated business and, to a lesser extent, non-profit institutions. Together, inventories and capital stock account for approximately 18.1% of these tangible assets at the end of 1984, as compared to 24.7% at the end of 1961, reflecting a relative decline in the importance of unincorporated business.

The household sector is the major surplus sector in the economy. It is thus a net supplier of funds in the economy, with the result that financial assets outweigh liabilities by an average ratio of 3.0 to 1.0 over the 24 years. This ratio has declined steadily, however, from 3.76 in 1961 to a low of 2.53 in 1976 only to recover to 3.24 in 1984. The growth of the financial assets of this sector, as measured by the annual rate of change, advanced from 7.0% in 1962 to 21.0% in 1979 but then fell sharply to 7.0% again in 1983.

Fluctuations in the ratio of financial assets to personal disposable income (PDI) do not appear, prime facie, very consistent with changes in the personal savings rate, and the two series appear to be somewhat contradictory from 1970-1975 (see Chart 1). In fact, while there has been a long-term rising trend in the saving ratio, the ratio of financial assets to PDI was about the same at the end of 1983 as in 1961. It is often assumed that the relatively high levels of the personal savings rate that have been witnessed since 1971 can lay the basis for substantial increases in consumer spending at some point. However, what remains as savings after deducting current expenditure[2] from current income can be used to accumulate financial assets, but also to liquidate outstanding debts or acquire tangible assets[2]. These two alternatives are not inconsistent with increases in the personal savings rate.

Personal sector saving in financial assets is concentrated in bank and other deposits, Canada Savings Bonds, life insurance and pensions, and equity of corporations[3]. The relative shares of these forms of saving have shifted over the last twenty-four years, showing that the nature by which this sector supplies funds to the rest of the economy has changed (see Chart 2).

The most significant change in the structure of the financial assets over the period has been the pronounced increase in deposits and the relative decline in other assets, especially bonds. Currency and deposits have grown from 25.2% of total financial assets in 1961 to 34.9% at the end of 1984. This shift away from bonds and into deposits also reflects the growth in, and increased competition among, the deposit-taking institutions, which has resulted in an increase in the amount of savings/funds channelled through these financial institutions. Total bonds have declined from 18.4% to 10.4% of financial assets. Declines are most apparent in corporate bonds and in the largest component, federal government bonds (of which Canada Savings Bonds average 85%). Despite a decline in

---

[2] Consumer durables can either be included in current expenditure and excluded from tangible assets (NIEA concepts) or excluded from current expenditure and included in tangible assets (NBSA concepts).

---

[3] The financial assets of persons can be viewed as being understated in their present form. Some analysts are of the opinion that the assets of the Canada and Quebec Pension Plans (whose relative shares in National Assets are not negligible) should be also included. The rationale for their inclusion is that such funds constitute saving and are available for future consumption.

the demand for life insurance[4], the "life insurance and pensions" component has maintained its share in the financial assets of this sector. This is due in part to the effect of the increase in the amount of saving through Registered Retirement Savings Plan in segregated funds of life insurance companies (the result of tax incentives) and is also in line with the general aging of the population[5]. Corporate shares have remained as a consistent proportion of the sector's asset portfolio.

The two largest items on the liability side of the sector's balance sheet are consumer credit and mortgages. Together, they account for between 81.5% (1961) and 87.3% (1984) of total liabilities for the sector. Consumer credit relates directly to the household's share, while mortgages in this sector are largely accounted for by households. The remainder of the liabilities consist mostly of bank oans from other financial institutions to unincorpoated business and non-profit institutions. The ratio of liabilities to net worth rose sharply through the 1960's to reach a high in 1978, only to decline steadily to the end of 1982. As might be expected his ratio has generally tended to decline during peiods of slowdown in economic activity and rise in periods of economic expansion.

Consumer credit is credit extended to persons to finance the purchase of consumer goods and services, largely consumer durables[6]. This suggests that changes in the level of consumer debt outstanding is related to changes in the stock of consumer durables. The annual rate of change of consumer credit debt exhibits roughly similar movements as the corresponding series for consumer durables. Differences between the two series are accounted for largely by the fact that the consumer debt series is also affected by changes in the rate of repayments. The ratio of consumer credit debt to personal disposable income grew from 16.1% in 1961 to a high of 22.9% in 1979 only to fall sharply to 18.0% at the end of 1982 (see Chart 3). One of the single most important factors in fostering the growth of consumer credit over most of the period was the evolution of attitudes regarding credit purchases and debt in general. Moreover, inflation and the resulting low "real" cost of borrowing in the early 1970's seemed to have encouraged the accumulation of tangible assets and a greater proportion of borrowing in the acquisition of such assets. The ratio of consumer credit debt outstanding to the stock of consumer durables owned by persons mirror the variations in the consumer credit to personal disposable income ratio.

For a discussion of this phenomenon, the reader is referred to the article by Randy Geehan, "The Life Insurance Industry in Canada, 1961-1979", Canadian Statistical Review, July 1981.

Census data indicate that the median age of the population has risen from 25.4 years in 1966 to 29.6 years in 1981.

[6] For a more detailed discussion of consumer credit, the reader is referred to the article by Patrick O'Hagan "Consumer Credit Demand in Canada, 1961-1982", Canadian Statistical Review, February 1983.

Mortgage credit in this sector covers mortgage loans secured almost exclusively by residential buildings (and the land associated with such buildings). The demand for mortgage financing is derived from both the demand for new housing and the refinancing of existing units. The trend in the annual growth rate of mortgage credit in this sector bears a close relationship to its counterpart in the tangible assets, residential structures, with the highest rates of growth in both series in the period 1970 to 1977. The ratio of mortgage debt to housing stock rose from 38.3% in 1961 to 57.5% in 1984. Mortgage credit outstanding as a proportion of personal disposable income also increased through the 1960's and 1970's (see Chart 4). Demographic factors affecting the demand for housing have contributed to the growth in mortgage credit. Factors affecting the demand for consumer credit have likely played a part in the demand for mortgages — double-digit inflation in the early 1970's and the associated historically low "real" rates of interest.

Non-Financial Corporations

Non-financial corporations include private corporations as well as government business enterprises. Non- financial private corporations earn the largest share of total corporate profits, on average, and account for the largest percentage of gross fixed capital formation in the economy. This sector, by virtue of its size, is thus of considerable interest by itself. This section will deal first with trends in non-financial private corporations in isolation and then extend the analysis to include government business enterprises.

Non-financial private corporations hold the largest portion of the economy's fixed capital stock. The sector accounts for 64.5% of all share capital, 8.0% of the non-government bond debt and 70.5% of the bank loans outstanding at the end of 1984. Trends in the balance sheet can be seen from a translation of the data to percentage form (see Table III). Total assets have increased nine-fold from 1961 to 1984. Tangible assets make up the major portion of this total, averaging 71.0% of total assets over the period. The annual rate of change of total assets is correlated with inflation, notably during the double-digit inflation of 1973-75 and 1979-81.

The largest tangible asset on the sector's balance sheet, excluding land, is fixed capital stock, ranging from 74.3% of tangible assets in 1961 to 79.8% at he end of 1984. Inventories' share in tangibles has declined from 19.0% to 12.4% over this period, eflecting, in part, improved methods of inventory management, in the light of higher costs in recent ears. The housing stock portion of tangible assets has risen slightly from 6.7% in 1961 to 7.8% in 1984.

The composition of financial assets — that average 9.0% of total assets — has shifted in the period nder review. There has been some substitution of urrency and deposits for short-term marketable ecurities (short-term paper and Treasury bills). The ector's share of lending via consumer credit has declined, reflecting both the separation of selling nd financing operations in the retail trade industry as well as the growth of consumer financing by hartered banks and other financial institutions.

There have also been declines in the relative proportions of corporate shares and bonds, held as assets, in favour of an increase in corporate claims. This last development is in line with the growth of large corporations, and their investment in their subsidiaries and/or affiliates.

The structure of the debt of non-financial private corporations has also changed (see Chart 5). Long-term financing via bond issues has slowed relative to other forms of borrowing, particularly since 1971. Bonds have declined as a proportion of outstanding debt from 24.4% in 1961 to a low of 10.9% in 1980 only to recover moderately to 13.1% by 1984. The major offset of this decline is a pronounced increase in the share of bank loans, and, to a lesser extent, loans from other financial institutions and short-term paper. Bank loans have risen from 11.4% of outstanding debt in 1961 to a high of 25.6% in 1981, before falling rather sharply to 21.4% in 1983 following substantial repayment of this instrument in that year. These changes in the composition of debt can be viewed as an overall shift away from long-term to short-term debt. It is likely that a significant portion of the changes in the composition of the liabilities since 1979 was related to interest rates and inflation.

The long-term trend to external debt financing is reflected in the debt to equity ratio for non-financial private corporations (see Chart 6). Debt to equity (or leverage ratio) is the relationship of borrowed funds to funds contributed by the owners either through share issues or retained earnings. The ratio of debt to book value equity[7] exhibits a long-term upward trend. This ratio has risen from 0.99 in 1961 to a high of 1.57 in 1982 only to deline to 1.37 in 1984. The sharpest growth in the debt to equity ratio occurred in 1980-81, coinciding with substantial takeover activity, financed to a significant extent from bank loans. However, these corporations have re-structured their balance sheets in 1983-84 by replacing short-term debt with long-term debt and expanding the equity base, through the issuance of shares and growth in retained earnings.

---

[7] Equity includes the book value of shares, contributed surplus, retained earnings and revaluations from recognized capital gains.

(1) Components may not balance due to rounding.

(2) Net worth is defined here as total assets less liabilities.

second debt to equity ratio can be constructed,
vhere equity is derived as total assets less liabilities
– i.e., net worth with tangible assets at current val-
ies. On this basis, the debt to equity ratio does not
iave a rising trend, though there was a spike in
980 which was largely reversed in 1983 (see Chart
). This measure of net worth contains not only
hares and accumulated earnings but also the sub-
tantial unrealized capital gains from holding tan-
ible assets over an inflationary period. This mea-
ure of net worth with assets at current values is
ften taken as the equity base that affects the deci-
ion-making process of corporations. This derived
et worth can be broken down between (i) the book
alue of equity and (ii) the revaluation of tangible
ssets, and it can be seen that the latter component
as grown relative to the former component (see
hart 7).

The inclusion of non-financial government business enterprises with non-financial private corporations to produce a total of non-financial corporate sector changes the size but not the overall structure of the balance sheet we have considered thus far in this section (see Table IV).

Measured by total assets, it can be seen that non-financial government business enterprises have grown relative to non-financial private corporations. Total assets of the former grew at a compound annual rate of 12.4% from 1961 to 1982, as compared to 11.6% for the latter. The ratio of non-financial private corporations to non-financial government business enterprises assets has increased from 19.0% in 1961 to 22.1% at the end of 1984.

Financial Institutions[8]

A developed financial system is a characteristic of any modern western economy. This section will examine some broad trends in the financial system over the period 1961 to 1984.

An appropriate indicator of the growth and the size of the financial system is the financial intermediation ratio — the ratio of the financial assets of financial institutions to total (economy-wide) financial assets. This ratio has increased steadily in the period under review (see Chart 8). The sharpest growth occurred in the period 1971 to 1976. Evidence of a marked increase in intermediation was apparent when examining the change in the composition of the financial assets of persons and unincorporated business — the largest surplus sector in the economy. The ratio of financial assets of financial institutions to GNP also indicates substantial growth in financial institutions over this same period (see Chart 9).

The combined balance sheet of the financial sectors (in percentages) can be used as a basis for highlighting some of the structural changes in the financial system from 1961 to 1984 (see Table V). Liabilities have largely shifted from life insurance and pensions into currency and deposits, indicating a more rapid growth of deposit-taking institutions relative to the insurance industry. Financial assets dominate the asset side of the balance sheet, averaging 96.0% of total assets. Consumer credit, loans and mortgages have increased their share in assets from 40.9% in 1961 to 50.1% in 1981. Excluding short-term paper and shares, marketable securities' share in total assets has declined sharply from 34.3% in 1961 to 13.7% in 1984. In this group, the sharpest drop was in Government of Canada bonds, 12.1% to 2.6%.

It is evident that the growth of the insurance industry has been considerably less than that of the other financial institutions, resulting in a significant loss of market share. The strongest growth has occurred in the other deposit-taking institutions — the near-banks (trust companies, credit unions and caisses populaires, mortgage loan companies). This result is in line with the trend toward term deposits and Registered Retirement Savings Plans and the relative decline in the amount of personal saving through life insurance. Among the near-banks, trust companies recorded the most rapid growth. Chartered banks asset growth was also substantial, resulting in an increase in their relative share. Other private financial institutions recorded declines in their shares due to relatively slow growth, with the exception of holding companies which grew significantly. The share of public financial institutions rose in line with the strong growth in provincial financial institutions.

(2) Net worth is defined here as total assets less liabilities.

Government[9]

This section will first examine the balance sheet of the federal government and then extend the analysis to include all levels of government.

Measured by total assets this sector's growth has been one of the weakest. Total assets increased 5.7 times from 1961 to 1984. Financial assets accounted for 62.0% of total assets in 1984 compared with 73.9% in 1961. The growth in liabilities was substantially greater than that of assets over the entire period. Liabilities grew 11.9 times from 1961 to the end of 1984. For most of the period net worth has been negative, and there is a pronounced downward trend to this series. Changes in the structure of the federal government's balance sheet can be seen from a translation of the data to percentage terms (see Table VI).

Tangible assets increased 8.3 times over the period under analysis. The main tangible asset of the federal government is fixed capital stock, ranging from 82.2% in 1961 to 83.6% in 1984 of tangible assets. This increase is due to a decline in the relative share of inventories. Financial assets rose 4.8 times from 1961 to 1984. The major financial asset is the federal government's investment in its government business enterprises. In 1961, the two largest financial assets were government claims (64.1%) and loans (14.8%). In 1984, the relative proportions had not shifted significantly (at 63.3% and 18.6%, respectively).

Net financial assets (i.e., financial assets less liabilities) are consistently negative over the period, but the magnitude changes with the variations in the federal government's budgetary balance. Liabilities were 3.4 times financial assets at the end of 1984, compared to 1.7 times in 1961.

The total liabilities of the federal government is a consequence of past budget deficits, and has increased since 1961 due to the predominance of such deficits, relative to surpluses, over the period. Liabilities can be broken down to show the changing proportion of marketable securities held by the Bank of Canada as well as the increasing share of such securities held by non-residents. While the debt has increased consistently in absolute terms it decreased as a proportion of GNP until 1975, but has been on a rising trend since (see Chart 10).

Between 1961 and 1984, the structure of the federal government's liabilities has changed although Government of Canada Bonds and Government of Canada Treasury bills remain the principal components (see Chart 12). At the end of 1984, bonds accounted for 62.4% (including Canada Savings Bonds which amounted to 23.6%) and Treasury bills for 27.3%. In 1961, bonds comprised 79.2% (with CSB's 21.4%) and Treasury bills at 9.9%. There has been a marked shift to marketable and shorter term debt with varying dependance on Canada Savings Bonds, and it would seem that many of the more significant shifts that occurred since 1979 were in response to the high nominal rates of interest.

The picture of government changes radically when we combine all levels of government and add provincial and municipal governments and hospitals. In terms of total assets, the other levels of government have grown much faster than the federal government. Total assets increased ten-fold over the period. This is composed of a thirteen-fold increase in tangible assets and an eight-fold increase in financial assets. Liabilities, on the other hand, grew 10.2 times, producing a faster rate of growth of net worth, which increased 11.2 times. The addition of the other levels of government reverses the negative net worth of the federal government.

---

[9] The Canada and Quebec Pension Plans are excluded from government in this analysis.

(1) Components may not balance due to rounding.

The structure of the combined balance sheet of governments is also somewhat different (see Table VII). Since provincial and municipal governments invest more heavily in fixed (social) capital, than does the federal government, tangible assets of total government ranged from 49.7% in 1961 to 58.3% at the end of 1984. Government claims were the main financial assets, but more recently provincial, municipal and federal bonds, have assumed increased importance, the result of holdings by other levels of government. Governments combined produce an aggregated domestic non-financial sector where liquidity (defined here as currency plus all marketable debt securities as a proportion of total assets) has increased over time. The major liabilities are federal, provincial and municipal bonds, and Treasury bills.

Rest of the World

The level of foreign investment in Canada and Canada's level of investment abroad are measured by the financial assets and liabilities of the Rest of the World (ROW) in the balance sheet accounts. Results at the National Balance Sheet level indicate that, whereas in absolute terms Canada's net liability abroad has grown rapidly, relative to the economy as a whole the position of the rest of the world declined up to 1975 but rose thereafter (see Charts 13 and 14). These results are now examined in more detail, in the balance sheet of ROW[10].

Structural changes in the balance sheet of ROW reveal some interesting trends (see Table VIII). The nature of the ROW claims on Canada has shifted rom relatively less foreign direct investment to more portfolio investment accompanied by a rapid build-up of currency and deposits in domestic financial institutions. Corporate claims, which contain the foreign direct investment[11], have declined a full 20 percentage points of total assets over the whole of the period. Shares have also fallen sharply in proportion to total less assets. With the exception of municipal government bonds, all components of marketable debt securities rose in relative terms — notably, provincial government bonds and corporate bonds. These trends in the assets have resulted in an increased proportion of domestic debt (including government debt) that is held by non-residents. While ROW's share of corporate claims declined from 56.2% to 34.6% over the period, there was a substantial increase in its market share of total bonds from 23.8% in 1961 to 44.4% at the end of 1984. Canada's claims on the ROW have also changed. In contrast to the asset side, corporate claims (which include Canadian direct investment abroad)[11] have grown relative to Canadian portfolio investment abroad. Liabilities of ROW have increased as a proportion of their total assets producing a relative decline in the net worth for this sector.

---

[10] As presented in the National Balance Sheet Accounts — a narrowly-defined balance sheet of the rest of the world (i.e., as it relates directly to Canada, which is a re-statement of the International Investment Position).

[11] This result becomes even more striking when it is considered that the foreign direct investment component of corporate claims has declined, from 100.0 percent in 1977 to 69.1 percent for the asset and 61.0 percent for the liability in 1983, the result of the inclusion of the banks' transactions with their subsidiaries from 1978.

[1] Components may not balance due to rounding.

Overall, ROW assets (Canada's liabilities) have not grown as fast as ROW liabilities (Canada's assets). The net worth of ROW increased 9.3 times from 1961 to 1984. ROW assets (financial assets only) increased 12.4 times while liabilities rose 18.1 times over the period. It can be seen that in 1961 assets were roughly three times liabilities as compared to only two times liabilities in 1984. The compound annual growth rate of ROW assets over the period was 11.6% while that of ROW liabilities was 13.4%. This has resulted in a less rapid rise in the net worth of ROW (Canada's net liability abroad) relative to Canada's net worth, which increased twelvefold over the last twenty-four years. The compound annual growth rate of ROW net worth was 10.2% as compared to 11.5% for Canada for the period 1961-1984.

It can be seen that while the extent of Canada's, debt and indebtedness, vis à vis the Rest of the World has increased, the nature of the relationship has changed. Most striking is that the ratio of foreign direct investment in Canada relative to other investments in Canada has declined sharply over the whole of the period under analysis.

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. For more information on filtering consult Quarterly Economic Summary, STC (Cat. 13-006). [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

---

e occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the nigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E,). I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and ting [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include dents entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

urce: Employment and Immigration Canada.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, re not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the nadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are ss subject to the problem of shifting weights and may be used as a measure of price change.

---

ncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individ-als in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]With-olding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been enerally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

or source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end o Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

---

[1] The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. [2] Claimants who receive benefits through the Commission's computer pay system during the reference week. [3] Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. [4] Annual figures are 12-month averages.

---

atistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. e industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of kers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all k stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

urce: Research Bulletin, Labour Canada.

Table 9: Total number of employees, by industry group, all survey units, Canada, based on the 1970 standard industrial classification

---

ese weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and es of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based 1982 expenditures," cat. 62-553, occasional.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.

[2] Shipments of goods manufactured within the establishments.

[3] Total new orders received during the period at estimated selling value, net of cancellations.

[4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

		Non-durable goods industries

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

	Inventories owned				Inventories held: Total			Inventories held: raw materials

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: **Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".**

Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel oducers according to the steel industry distribution code.

---

[1] Gas types are included [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

lote: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes lus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, fubricating oil and grease, still gas and other products.

---

dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the sult of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of ,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly
ource: **Housing Starts and Completions (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes ol inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading' indications of the changing relationship of costs and income The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [6] Allowance for the take-over of Nova Scotia Light & Power common shares.

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a descriptio of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitiv intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjuste series will contain irregular fluctuations. Small changes between months in the adjusted series ma simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for whic the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a movin average of the period equal to the MCD tends to smooth irregular movements which may obscure th underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Assistant Chief Statistician, Informatics and Methodology Field
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Gross National Product
Third Quarter 1985

Preliminary estimates indicate that Gross National Product rose 2.1% to a level of $458.3 billion, seasonally adjusted at annual rates, in the third quarter. After allowing for a continued moderate price change of 0.4%, this represented an increase of 1.6% in real GNP.

The gain in real GNP follows growth of about 1% in each of the previous three quarters. Over this period, final domestic demand strengthened, rising 1.6% in the third quarter, driven by household demand for consumer goods and housing. In addition, non-farm business stock accumulation contributed significantly to growth in the third quarter. As is usual in such circumstances, the gains in domestic demand were accompanied by rising imports. Together with little change in exports, this moved the real external trade balance on goods and services into a deficit.

Consumer spending on goods and services expanded 1.6% in volume in the third quarter, compared to an average quarterly growth rate of 1.4% in the first half of the year. Spending on durable goods (+3.1%) continued to lead the increase; the most notable gains were in purchases of autos and home entertainment equipment. Demand for non-durable goods rose by 1.2% while spending on semi-durable goods was up 2.2%.

Outlays on residential construction surged by 13% in constant dollars, after an 8% increase in the second quarter. New housing construction rose sharply, up 18%, while real estate commissions continued to grow strongly. Household spending, as reflected in personal expenditure and residential construction, has contributed about three-quarters of the gain in final domestic demand to date in 1985.

Real business investment in plant and equipment rose by 2.7%, to bring the cumulative gain to date in 1985 to 8%. Expenditures on non-residential construction were little changed, following a jump of 8% last quarter. Led by motor vehicle purchases, spending on machinery and equipment rose 5%, fo lowing gradual increases in the first half of 1985.

Non-farm business inventories rose about $2.3 billion in volume in the third quarter. About a third of the increase originated in motor vehicles, although increases were spread over all industries. There were also sizeable gains in most industries related to business investment, such as machinery and electrical products.

Following a decline of 1% in the first half of 1985, real exports of goods and services edged up by 0.9% in the third quarter. The level of merchandise exports stands virtually unchanged from a year earlier. The slight increase in export demand was largely concentrated in end products, dominated b higher auto shipments to the United States. There was pronounced weakness in exports of crude and fabricated materials, and this was reflected in lowe prices for these goods. Total imports increased 5% in volume, as merchandise imports jumped by 7% the major part of this increase originated in motor vehicles and parts.

Wages, salaries, and supplementary labour income rose by 2.1%, compared to an average gain of 1.7% in the previous five quarters. A slight slowdown in labour income in the goods-producing industries was outweighed by an acceleration in the service-producing industries.

Personal income was up by only 1%, in the third quarter, as the gain in labour income was partly o set by a drop in net farm income. Disposable income was virtually unchanged, as income tax coll tions continued to rebound following a large decli early in 1985. With personal expenditure up 2.5%

the personal savings rate dropped from 13.3% to 11.3% in the quarter.

Corporate profits before taxes were unchanged in the third quarter, following a slight drop in the previous quarter. Over the past four quarters, corporate profits rose about 3%, the slowest gain since the recovery began in 1983. Lower profits in mining and manufacturing in the third quarter offset gains in other industries.

The total government sector deficit, on a national accounts basis and seasonally adjusted at annual rates, eased from $31.0 billion to $25.0 billion. Although federal government revenues declined 2.2%, argely on account of a fall in energy-related indirect tax collections, total revenues, excluding intergovernmental transfers, were little changed at $193.7 billion in the third quarter. Total expenditures declined 2.3% in the quarter, mainly resulting from the cessation of federal subsidies granted under the National Energy Program and lower federal expenditure on goods and services.

Available on CANSIM: matrices 525-527, 1000-1024.

A printout containing all tables is also available on the day of release from the Gross National Product Division ($35/$140).

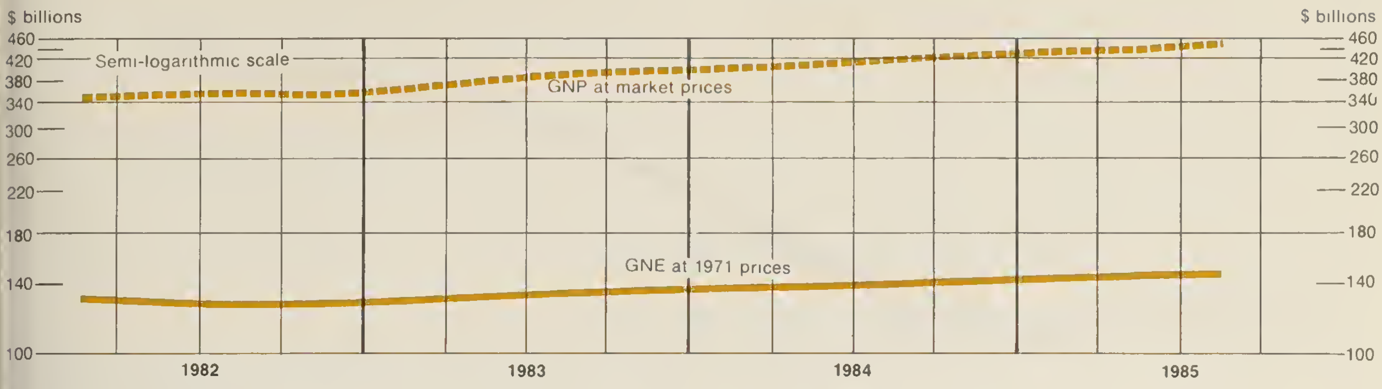
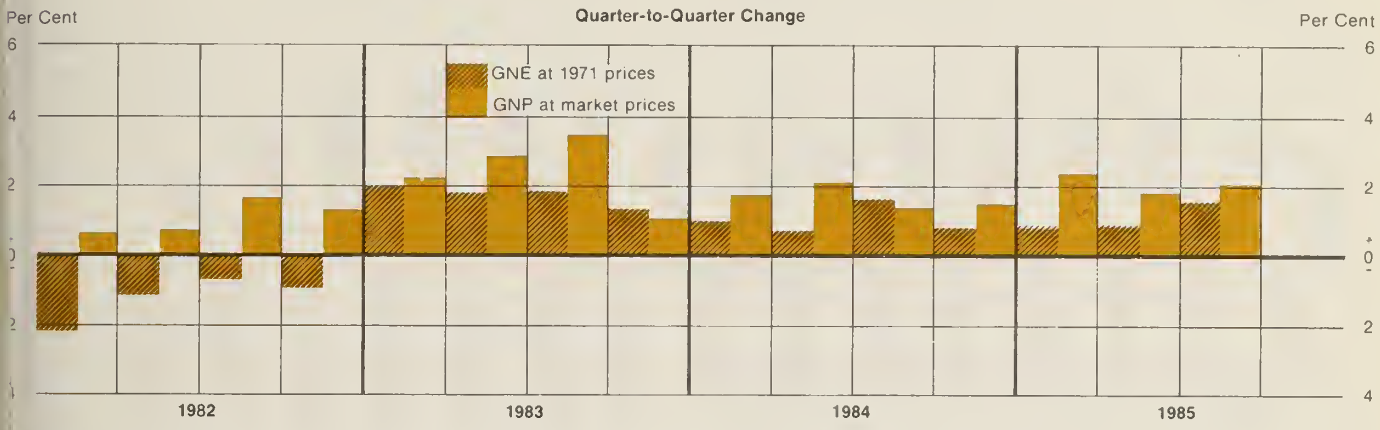
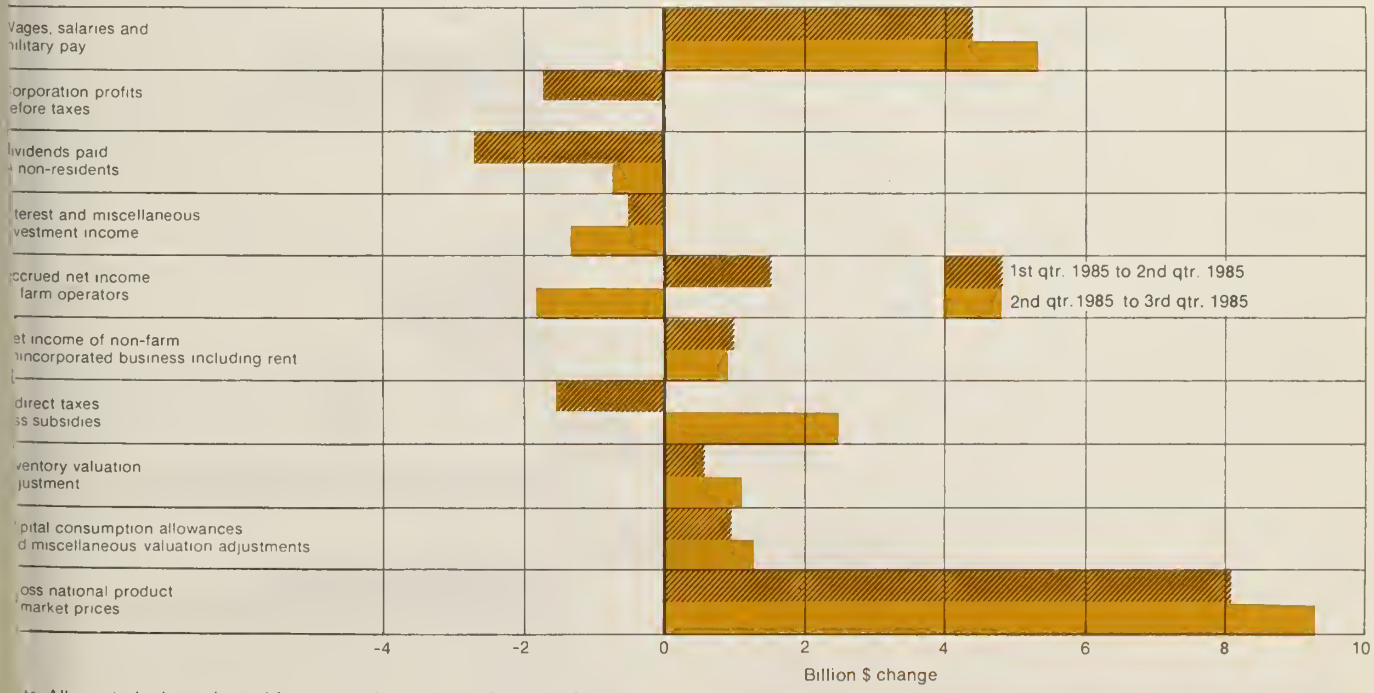
Gross National Product, seasonally adjusted at annual rates, rose 2.1% in the third quarter of 1985 to a level of $458.3 billion. After allowing for a continued moderate price increase of 0.4% real GNP grew by 1.6%.



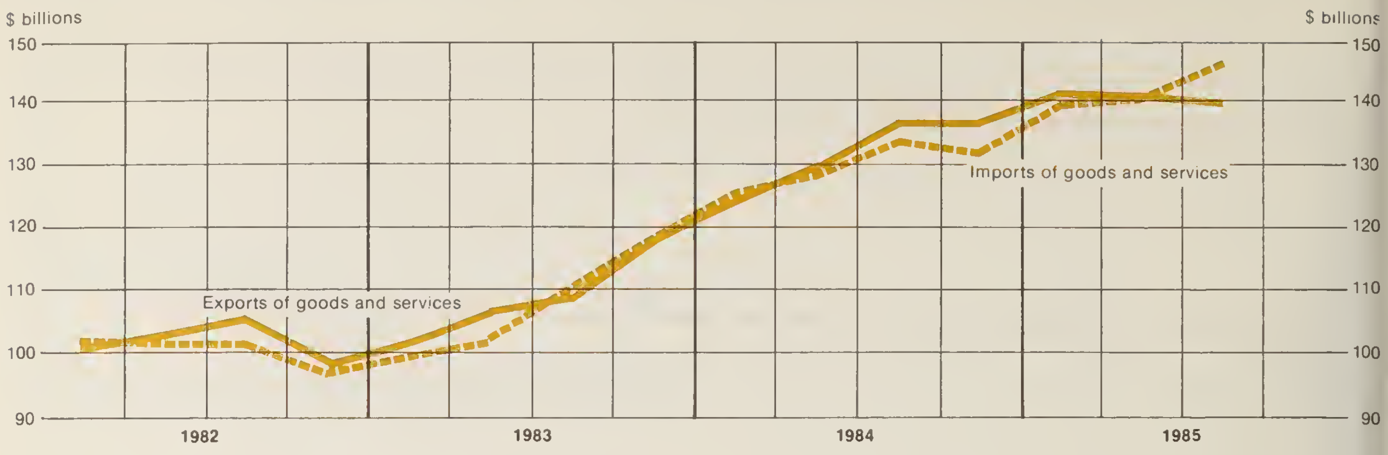


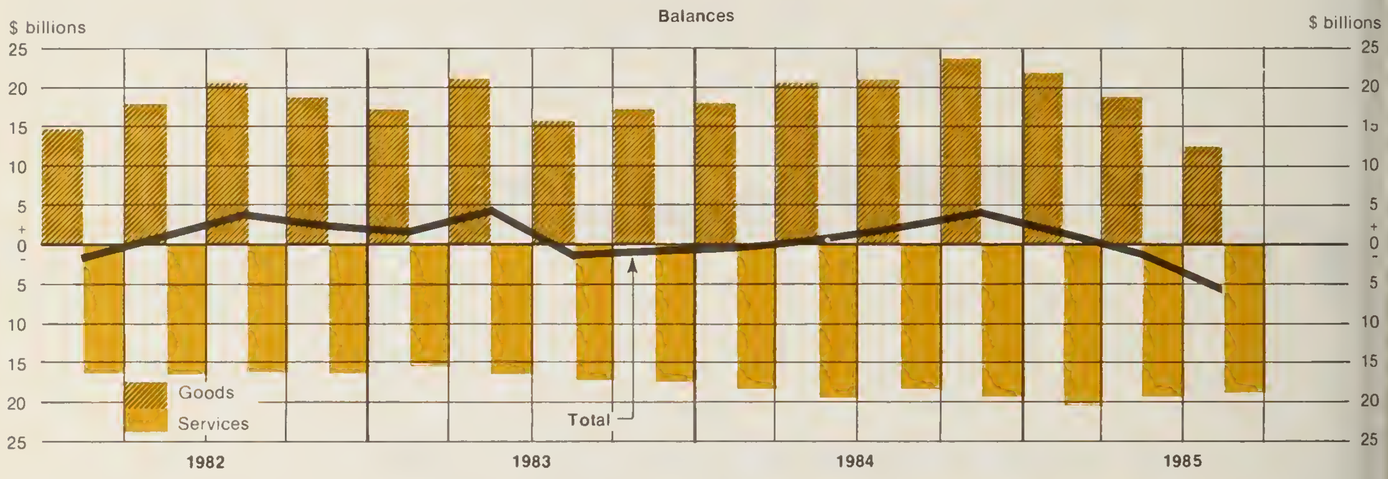
Vages, salaries and supplementary labour income and military pay and allowances rose by 2.1% compared to an average gain f 1.7% in the previous five quarters. Corporate profits before taxes were unchanged in the third quarter following a slight drop n the previous quarter.



te: All quarterly data adjusted for seasonal variation and at annual rates

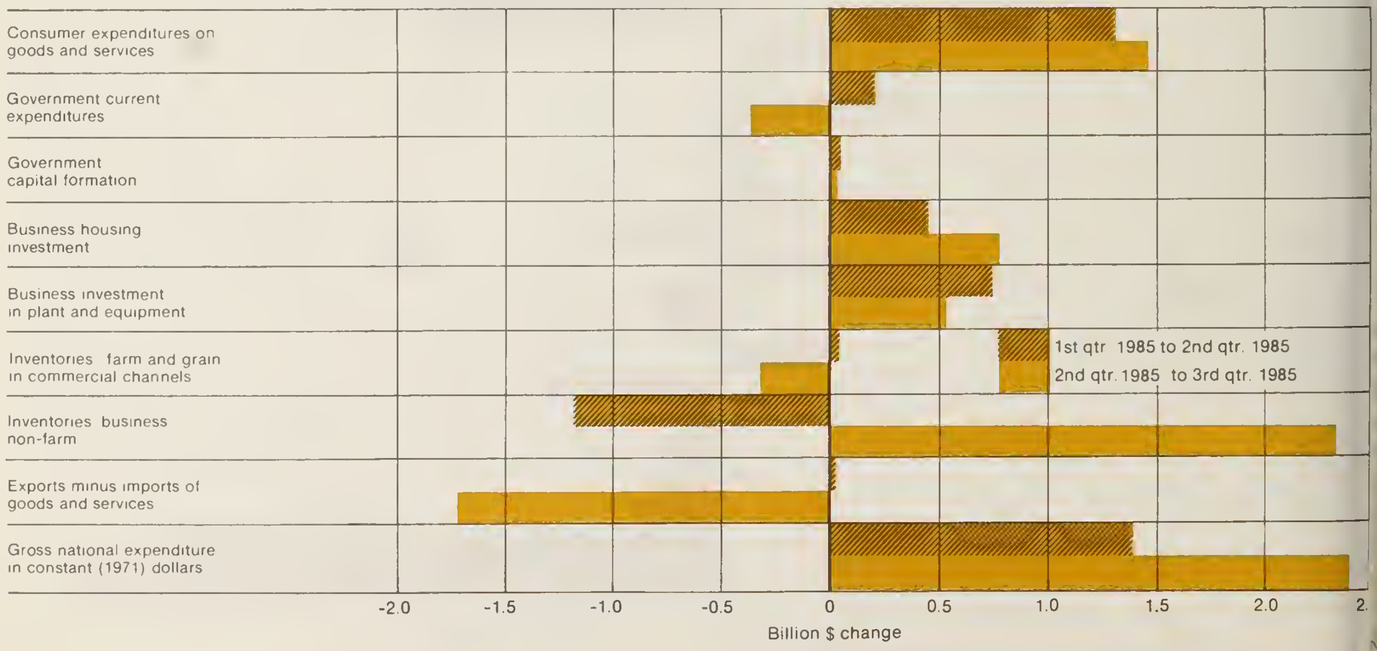
While imports of goods and services rose 1.5% and 3.2% in the second and third quarters respectively, exports fell by 0.1% and 0.7% during the same period; as a result, the deficit in trade of goods and services grew by $5.4 billion, to a third quarter annual rate of $6.5 billion.





In the third quarter, real personal expenditure on goods and services, business investment in plant and equipment and outlays on residential construction continued to grow steadily. Non-farm business inventories grew by $2.3 billion.

Quarterly changes in GNE and components in constant (1971) dollars



Note: All quarterly data adjusted for seasonal variation and at annual rates

Financial Activity in Canada — Third Quarter 1985

Accompanying the strength of economic performance in the third quarter, activity on conventional credit markets by non-financial domestic sectors amounted to $24.5 billion (see line 5, Financial Market Summary Table). This was a substantial increase over the same period in 1984, when $13.1 billion was so raised.

The willingness of households and non-financial private corporations to assume more debt appeared to be influenced by a number of factors including: very strong housing markets and consumer expenditures, particularly on durables; strong personal balance sheets as the result of high savings over the past several years with the accumulation of financial assets, and the reduction in debt as a proportion of personal disposable income; an associated improved psychological attitude from falling interest ates and slowing price increases; inventory accumulation; the continuing pick-up in fixed capital formation; and stock prices reaching new highs. As a esult, non-financial domestic sectors raised funds on conventional capital markets that amounted to 20% of the seasonally unadjusted value of goods and services produced in the quarter, up from only 2% in the equivalent quarter in 1984. The compa-able figure was 16% for the second quarter, normally a stronger period than the third.

Household financing on conventional credit markets was $7.2 billion in the quarter, over four times the orrowing in the third quarter of 1984. The major eason for the jump was net mortgage borrowing, p some $5.1 billion in the quarter. The third quar-er saw substantial increase in housing construction nd completion as well as a much stronger second-ry market. With this sharp rise in the period under eview, household mortgage debt rose 9% in the welve months ended September 1985. This in-rease was somewhat less than the growth in con-umer credit over the same period. Spurred by fast growing expenditures on consumer durables — up 16% over the year ended September — consumer credit rose 11.4% over the same period. The $1.4 billion rise in the quarter was down from the second quarter — reflecting a pronounced seasonal element in this instrument — but was up sharply from the third quarter of 1984. As a result of the sharply higher borrowing via these instruments, households, for the second quarter in succession, accounted for over a quarter of the funds raised on conventional credit markets by non-financial domestic sectors.

Non financial private corporations' financing on these markets was even stronger than households. With $7.3 billion in the third quarter, they have raised $19.7 billion on these markets so far in 1985, almost 30% of the total. The single biggest contributing factor to this growth in the third quarter was borrowings of short-term paper, including bankers' acceptances, which rose $4.9 billion. The rapid increase in this instrument during the quarter — raising the level outstanding 30% — seemed to be related partly to the build-up in inventories but mainly to a widening of about forty basis points in the yield differential with the prime rate. Probably partly as a result, bank loans owed by this sector fell by over $700 million. This reduction in bank debt outstanding was a continuation of the process, begun in 1982, of reducing these companies' leverage. The peak of bank loans outstandings was $86.3 billion reached in the first quarter of 1982. The level outstanding at the end of September was down $5.4 billion from that level, having shown very little change over the previous twelve months. The pick up in fixed capital formation, evident since the beginning of 1985, continued into the third quarter although at a slightly slower rate. Residential construction and machinery and equipment appeared to be the major contributors. This increased activity was reflected in the marked pick-up in net new bond issues, which realized $1 billion. The bond market has been depressed for several quarters: the last time net new bond issues for this sector were in excess of one billion dollars was in the second quarter of 1983. There has been a five percent growth in this instrument over the twelve months. The bond issues have tended to be overshadowed by the surge in equity financing which reached a quarterly peak of $4.2 billion in the second quarter. The third quarter's net new stock issues amounted to $1.7 billion, which, although lower than recent quarters, reflected the continued improvement in the equity base of this sector that has been on-going since the recession. Real estate operators (17%) non-metallic minerals (11%) and metal mines (10%) were the major issuers.

With the much increased activity by other sectors, the proportion of funds raised by governments on domestic conventional markets fell sharply. The federal government's deficit amounted to $5.7 billion, or 4.6% of GNE, down from 5.8% in the same period of 1984. The main elements in the reduction were, on the income side, increased taxes on persons, and, on the expenditure side, lower subsidies (largely related to petroleum payments).

Borrowing $8.7 billion, general government accounted for a little over a third of the funds raised on conventional credit markets by non-financial domestic sectors, compared with over one half in both the previous quarter and the equivalent period the year earlier. The Government of Canada raised $8.1 billion, with a record $5.7 billion being borrowed via Treasury bills. As at the end of September, the average term to maturity of the federal government's debt was five years and three months, down from five years and six months at the end of June. (These ratios exclude Canada Savings Bonds). The yields on Treasury bills have been falling since the first quarter (when a reversal of the longer term trend was prompted by pressure on the Canadian dollar). In the current quarter, yields on 91-day bills fell in the order of 60 basis points, compared with bond yields that saw minimal movement. If interest rates continue to fall it will have proved beneficial to have financed the government's deficit with short-term debt. Net new marketable bond issues produced $3.9 billion, and included a Euro-U.S. dollar issue that raised $1.2 billion to supplement the international reserves. There were $946 million in redemptions of Canada Savings Bonds, down from $1.3 billion in the previous quarter.

With the market for bank loans weakening (down $250 million), but with deposits rising quite rapidly, the chartered banks became major purchasers of Treasury bills in the quarter, acquiring $2.6 billion, with most of the increase occurring in September. These developments resulted in the banks' excess secondary reserve ratio jumping from a two and half year low of 3.60 in August to 6.76 in September, its highest level since October 1983. The banks were also major purchasers of short-term paper, bankers' acceptances, in particular. The banks received advances from the Bank of Canada to maintain liquidity, and the Canada Deposit Insurance Corporation made loans to banks to pay insured depositors.

During the quarter, there were a number of large transactions with non-residents, of which the largest involved the repatriation of a foreign owned oil company. Subsequent transactions with a federal government non-financial enterprise have been reflected in acquisitions by the latter of both financial and non-financial items.

The Financial Market Summary Table compresses the abundance of detail presented in the Financial Flows sector tables by aggregating secto and by deleting non-market instruments such as trade credit and claims on associated enterprises. The table also provides a useful approximatio to final borrowing via financial markets (i.e., the organized markets for security issues and negotiated loans) and avoids double counting of th intermediary borrowing and re-lending of financial institutions. Line 5 (Total Borrowing by Domestic Non-Financial Sectors) provides th unduplicated total which serves as a simple summary statistic of domestic credit market activity. The addition of the Rest of the World and Financi Institutions (lines 6 and 8) completes the system and consequently line 9 (Total Funds Raised=Total Funds Supplied) reflects the basic identity th the change in liabilities, summed across sectors, for an instrument or instruments equals the change in assets, summed across sectors, for the sam instrument or instruments. Further discussion of the table is contained in an article published in Financial Flow Accounts, Second Quarter 1976 an in the Canadian Statistical Review, March 1977.

(1) Since Sector XII, Social Security Funds, has been consolidated with General Government, the holdings by the Funds of Provincial and Feder Government bond debt are netted out. the asset bond figure (category 2420) for Sector XII is subtracted from the sum of the liability bon figure for Sectors X (Federal Government) plus XI (Provincial and Local Governments and Hospitals).

(2) Separate figures for the share liabilities of the Rest of the World (Sector XIII) are not available but since Foreign Investments (category 353 consists mostly of shares, it is classified to Stocks.

(3) The Stock figure included in Sector I and II is the true residual of category 3520, i.e., it is the sum of category 3520 (the stock liability) le the sum of category 2520 (the stock asset) for sectors III through XIII. This procedure is necessary to ensure the balance between total fun supplied and raised in line 9. In the main Financial Flows Matrix the sum across sectors of corporate claims plus stocks on the liability si equals the sum of the two on the asset side; however, stocks alone do not balance because stocks on the liability side include shares issu to associated enterprises (included in corporate claims on the asset side).

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj. [1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] This item differs from col. 6, Table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts.

For source see Table 1.9.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

	Gross fixed capital formation: Business: Total	Residential construction	Non-residential construction	Machinery & equipment	Exports of goods and services: Total	Of which: merchandise	Deduct: imports of goods and services: Total	Of which: merchandise	Gross national expenditure
D	40636	40637	40638	40639	40640	40641	40642	40643	40625
983	276.6	287.4	280.0	266.9	306.5	306.1	299.3	292.1	290.1
984	282.2	290.6	283.8	276.0	311.2	309.2	316.4	308.4	298.3
984 2	281.8	291.9	283.2	275.1	317.1	316.3	315.4	306.9	299.1
3	282.3	289.5	283.0	277.7	311.4	309.1	319.5	311.7	298.4
4	284.6	291.1	285.0	280.5	309.8	306.8	320.8	312.1	300.4
985 1	288.3	294.9	286.4	286.3	318.0	315.7	324.1	313.4	304.7
2	291.4	298.5	289.0	289.5	323.4	321.3	335.2	327.5	307.4
3	292.7	300.8	290.7	289.2	318.4	315.1	329.2	319.7	308.7

These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-
-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality,
nd therefore may be used as indicators of price change.

or source see Table 1.9.

able 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

ear nd uarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. [2] Claimants who receive benefits through the Commission's computer pay system during the reference week. [3] Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. [4] Annual figures are 12-month averages.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

* For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

		Non-durable goods industries

---

[1] Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

Year and month	Shipments[1]							Unfilled orders at end of month						
	Consumer goods							Consumer Goods						
	Non-durable and semi-durable	Durable	Capital goods	Construction materials and components	Other intermediate goods & supplies	Export-oriented industries	Supplementary classification: automotive products	Non-durable and semi-durable	Durable	Capital goods	Construction materials and components	Other intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are utually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

ote: All series are subject to revision each year when more recent Census of Manufactures data become available.

ource: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

	Inventories owned				Inventories held: Total			Inventories held: raw materials						
	Consumer goods							Consumer goods						
End of period and month	Non-durable and semi-durable	Capital goods	Construction materials and components	Supplementary classification: automotive products	Consumer goods Durable	Intermediate goods and supplies	Export-oriented industries	Non-durable and semi-durable	Durable	Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

Section 11 • External Trade

1. Merchandise Trade on a Balance of Payments Basis

108 1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
109 1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis
1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis
110 1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
112 1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis

2. Merchandise Trade on a Customs Basis

114 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
115 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
116 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis
118 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

---

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period [3] Mainly deposits of foreign banks [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency [6] Excluding Canadian day-to-day loans [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc), interest on government-held funds, and taxes collected on behalf of and transferred to other governments [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts [4] Includes Petroleum and Gas Revenue tax [5] Includes special excise tax on gasoline.
